Mathematical and Algorithmic Puzzles Pramod Ganapathi, 2024-05-29 This book presents serious mathematical and algorithmic puzzles that are mostly counterintuitive The presented puzzles are simultaneously entertaining challenging intriguing and haunting This book introduces its readers to counterintuitive mathematical ideas and revolutionary algorithmic insights from a wide variety of topics The presented solutions that are discovered by many mathematicians and computer scientists are highly counterintuitive and show supreme mathematical beauty These counterintuitive solutions are intriguing to the degree that they shatter our preconceived notions shake our long held belief systems debunk our fundamental intuitions and finally rob us of sleep and haunt us for a lifetime Multiple ways of attacking the same puzzle are presented which teach the application of elegant problem solving strategies

[Programming for the Puzzled](#) Srinivas Devadas, 2017-11-16 Learning programming with one of the coolest applications around algorithmic puzzles ranging from scheduling selfie time to verifying the six degrees of separation hypothesis This book builds a bridge between the recreational world of algorithmic puzzles puzzles that can be solved by algorithms and the pragmatic world of computer

programming teaching readers to program while solving puzzles Few introductory students want to program for programming's sake Puzzles are real world applications that are attention grabbing intriguing and easy to describe Each lesson starts with the description of a puzzle After a failed attempt or two at solving the puzzle the reader arrives at an Aha moment a search strategy data structure or mathematical fact and the solution presents itself The solution to the puzzle becomes the specification of the code to be written Readers will thus know what the code is supposed to do before seeing the code itself This represents a pedagogical philosophy that decouples understanding the functionality of the code from understanding programming language syntax and semantics Python syntax and semantics required to understand the code are explained as needed for each puzzle Readers need only the rudimentary grasp of programming concepts that can be obtained from introductory or AP computer science classes in high school The book includes more than twenty puzzles and more than seventy programming exercises that vary in difficulty Many of the puzzles are well known and have appeared in publications and on websites in many variations They range from scheduling selfie time with celebrities to solving Sudoku problems in seconds to verifying the six degrees of separation hypothesis The code for selected puzzle solutions is downloadable from the book's website the code for all puzzle solutions is available to instructors

Learning Algorithms Through Programming and Puzzle Solving Alexander Kulikov, Pavel Pevzner, 2018-12-17 Learning Algorithms Through Programming and Puzzle Solving is one of the first textbooks to emerge from the recent Massive Open Online Course MOOC revolution and a companion to the authors online specialization on Coursera and MicroMasters Program on edX The book introduces a programming centric approach to learning algorithms and strikes a unique balance between algorithmic ideas programming challenges and puzzle solving Since the launch of this project on Coursera and edX hundreds of thousands students tried to solve programming challenges and algorithmic puzzles covered in this book The book is also a step towards developing an Intelligent Tutoring System for learning algorithms In a classroom once a student takes a wrong turn there are limited opportunities to ask a question resulting in a learning breakdown or the inability to progress further without individual guidance When a student suffers a learning breakdown that student needs immediate help in order to proceed Traditional textbooks do not provide such help but the automated grading system described in this MOOC book does The book is accompanied by additional educational materials that include the book website video lectures slides FAQs and other resources available at Coursera and EdX
