Rose, 1985 *A Guide to Commercial Artificial Intelligence* Wendy B. Rauch-Hindin, 1988 Rauch Hindin discusses how artificial intelligence AI differs from traditional programs and the strategies and problems of bringing AI into an organization She explains how systems with specialized problem solving expertise work and how to build one using AI application development tools She also covers a number of real world AI applications in industry business and finance science medicine and engineering AI programming languages the different types of computer hardware that can run AI systems and the underlying concepts and potential of state of the art expert systems for automated programming ISBN 0 13 368770 8 pbk 28 95 **On to C** Patrick Henry Winston, 1994 A concise yet clear introduction to the C programming language A practicing programmer can use this book to learn the essentials of the language without a lot of time consuming overhead Key concepts and techniques are learned in their natural order as features are added to a short yet representative C program Innovating Luis Perez-Breva, 2017-02-10 Discover the MIT developed doer s approach to innovation with this guide that reveals you don t need an earth shattering idea to create a standout product service or

business just a hunch that you can scale up to impact Innovation is the subject of countless books and courses but there s very little out there about how you actually innovate Innovation and entrepreneurship are not one and the same although aspiring innovators often think of them that way They are told to get an idea and a team and to build a show and tell for potential investors In *Innovating* Luis Perez Brea describes another approach a doer s approach developed over a decade at MIT and internationally in workshops classes and companies He shows that innovating doesn t require an earth shattering idea all it takes is a hunch Anyone can do it By prototyping a problem and learning by being wrong innovating can be scaled up to make an impact As Perez Brea demonstrates nothing is new at the outset of what we only later celebrate as innovation In *Innovating* the process illustrated by unique and dynamic artwork is shown to be empirical experimental nonlinear and incremental You give your hunch the structure of a problem Anything can be a part Your innovating accrues other people s knowledge and skills Perez Brea describes how to create a kit for innovating and outlines questions that will help you think in new ways Finally he shows how to systematize what you ve learned to advocate communicate scale up manage innovating continuously and document you need a notebook to converse with yourself he advises Everyone interested in innovating also needs to read this book

The Age of Spiritual Machines Ray Kurzweil,2000-01-01 NATIONAL BESTSELLER Bold futurist Ray Kurzweil author of *The Singularity Is Near* offers a framework for envisioning the future of machine intelligence a book for anyone who wonders where human technology is going next The New York Times Book Review Kurzweil offers a thought provoking analysis of human and artificial intelligence and a unique look at a future in which the capabilities of the computer and the species that invented it grow ever closer BILL GATES Imagine a world where the difference between man and machine blurs where the line between humanity and technology fades and where the soul and the silicon chip unite This is not science fiction This is the twenty first century according to Ray Kurzweil the restless genius The Wall Street Journal ultimate thinking machine Forbes and inventor of the most innovative and compelling technology of our era In his inspired hands life in the new millennium no longer seems daunting Instead it promises to be an age in which the marriage of human sensitivity and artificial intelligence fundamentally alters and improves the way we live More than just a list of predictions Kurzweil s prophetic blueprint for the future guides us through the inexorable advances that will result in Computers exceeding the memory capacity and computational ability of the human brain with human level capabilities not far behind Relationships with automated personalities who will be our teachers companions and lovers Information fed straight into our brains along direct neural pathways Eventually the distinction between humans and computers will have become sufficiently blurred that when the machines claim to be conscious we will believe them

Generating Natural Language Descriptions With Integrated Text and Examples Vibhu O. Mittal,2022-11-30 This book discusses issues in generating

coherent effective natural language descriptions with integrated text and examples This is done in the context of a system for generating documentation dynamically from the underlying software representations Good documentation is critical for user acceptance of any complex system Advances in areas such as knowledge based systems natural language and multimedia generation now make it possible to investigate the automatic generation of documentation from the underlying knowledge bases This has several important benefits it is always accessible it is always current because the documentation reflects the underlying representation and it can take the communication context such as the user into account The work described in this book compiles results from cognitive psychology and education on effective presentation of examples as well as work on computational generation of examples from intelligent tutoring systems It also takes into account computational learning from examples and a characterization of good examples for just this purpose Issues arising from these research areas as well as issues coming from the author s own corpus analysis of instructional and explanatory texts are discussed in the context of generating natural language descriptions of software constructs A text planner is used for a hierarchy of communicative goals Examples are treated as an integral part of the planning process and their interaction with text is represented at all stages The strengths and limitations of this approach are also discussed Although the focus of this book is the generation of natural language descriptions a similar set of issues need to be addressed in the generation of multimedia descriptions This book will be of interest to all researchers working in the areas of natural language interfaces intelligent tutoring systems documentation and technical writing and educational psychology
