**Characterisation of Bulk Solids** Don McGlinchey, 2009-02-12 Handling of powders and bulk solids is a critical industrial technology across a broad spectrum of industries from minerals processing to bulk and fine chemicals and the food and pharmaceutical industries yet is rarely found in the curricula of engineering or chemistry departments With contributions from leading authors in their respective fields *Characterisation of Bulk Solids* provides the reader with a sound understanding of the techniques importance and application of particulate materials characterisation It covers the fundamental characteristics of individual particles and bulk particulate materials and includes discussion of a wide range of measurement techniques and the use of material characteristics in design and industrial practice The reader will then be in a

better position to diagnose solids handling and processing problems in industry and to deal with experts and equipment suppliers from an informed standpoint Written for post graduate engineers chemical scientists and technologists at all stages of their industrial career the book will also serve as an ideal primer in any of the specialist areas to inform further study

Merkus,Gabriel M.H. Meesters,2013-11-19 Particulate products make up around 80% of chemical products from all industry sectors Examples given in this book include the construction materials fine ceramics and concrete the delicacies chocolate and ice cream pharmaceutical powders medical inhalers and sun screen liquid and powder paints Size distribution and the shape of the particles provide for different functionalities in these products Some functions are general others specific General functions are powder flow and require at the typical particulate concentrations of these products that the particles cause adequate rheological behavior during processing and or for product performance Therefore this book addresses particle packing as well as its relation to powder flow and rheological behavior Moreover general relationships to particle size are discussed for e g color and sensorial aspects of particulate products Product specific functionalities are often relevant for comparable product groups Particle size distribution and shape provide for example the following functionalities dense particle packing in relation to sufficient strength is required in concrete construction ceramic objects and pharmaceutical tablets good sensorial properties mouthfeel to chocolate and ice cream effective dissolution flow and compression properties for pharmaceutical powders adequate hiding power and effective coloring of paints for protection and the desired esthetical appeal of the objects adequate protection of our body against sun light by sunscreen effective particle transport and deposition to desired locations for medical inhalers and powder paints Adequate particle size distribution shape and porosity of particulate products have to be achieved in order to reach optimum product performance This requires adequate management of design and development as well as sufficient knowledge of the underlying principles of physics and chemistry Moreover flammability explosivity and other health hazards from powders during handling are taken into account This is necessary since great risks may be involved In all aspects the most relevant parameters of the size distribution and particle shape have to be selected In this book experts in the different product fields have contributed to the product chapters This provides optimum information on what particulate aspects are most relevant for behavior and performance within specified industrial products and how optimum results can be obtained It differs from other books in the way that the critical aspects of different products are reported so that similarities and differences can be identified We trust that this approach will lead to improved optimization in design development and quality of many particulate products
