Abstract

The concept of mindfulness has gained increasing attention among scholars over the last decade. While proposed within the area of education, health, and consumer behavior, its benefits have attracted researchers in several other domains, including information technology. The importance of such research being undertaken in several disciplines, particularly in the context of the current COVID-19 pandemic, has again renewed scholars' interest in studying mindfulness in information systems. This literature review aims to identify the current state of research on mindfulness in information systems, as well as to explore its implications on the field. The authors first define mindfulness and its various conceptualizations. Then, they identify the main research streams in the area, including the effects of mindfulness on user behavior, the role of mindfulness in information systems, the relationship between mindfulness and information systems, and the implications of mindfulness on the design of information systems. Finally, they discuss the implications of this research for information systems research and practice, and identify future research directions.

Keywords: mindfulness, information systems, COVID-19, user behavior, information systems research

Introduction

Background

In the last few years, mindfulness (mindfulness-based interventions) has gained significant attention and acceptance among researchers, scholars, and practitioners. It is a form of meditation that involves paying attention to the present moment, without judgment, and observing thoughts and feelings as they arise. It is based on the assumption that the individual's well-being is determined by how they relate to an ever-changing internal experience of feeling and thought. This form of meditation has been widely studied and its benefits have been found to be significant. It has been shown to be effective in reducing stress, anxiety, and depression, and improving overall well-being. It has also been found to be effective in improving cognitive function, and reducing the risk of heart disease and stroke. The benefits of mindfulness have been found to be significant in a variety of contexts, including in the workplace, in education, and in healthcare. The benefits of mindfulness have been found to be significant in a variety of contexts, including in the workplace, in education, and in healthcare.
