Advances in Meat Processing Technologies: Modern Approaches to Meet Consumer Demand Daneysa L. Kalschne, Marinês P. Corso, Cristiane Canan, 2020-08-31 Meat and meat based products play an important role as foods in the diets of people around the world. However, environmental and social issues have posed a challenge to meat production processing plants with the advent of more consumer conscious production values across the food processing industry and a changing attitude among some communities towards the consumption of products from animal origin. The development of meat science and technology has brought solutions that allow the consumption of meat in a greater proportion from the source. Traditional processes such as salting, smoking, and fermentation have been refined, and more recently, processes such as emulsification, marinating, and tenderizing of meat have further diversified meat products. Meat processing technology is also required to meet consumer expectations and demands for nutritious and safe food. Consumer requirements have pushed for need for adaptation and modernization of slaughterhouses as well as the use of more suitable processing technologies for saving water, energy, and reducing waste production, all while trying to provide a high level of nutritional, sensory, and food safety for consumers. *Advances in Meat Processing Technologies* aims to inform students, researchers, lecturers, and others who are interested in the subject about new meat and meat based product processing technologies. The handbook covers a variety of meat processing technologies including dry fermentation, meat emulsification, curing, marinating, restructuring, and processing of non-emulsified meat and meat analogues. Additional chapters cover the use of additives and ultrasound technology in meat processing as well as different strategies suitable for meat processing operations. The simple, topical presentation of the book, which covers a wide variety of products, makes the book a key reference for informing students, researchers, lecturers, professionals, and general readers who are interested in the subject of meat processing technology.

Advances in Meat Processing Technology Alaa El-Din A. Bekhit, 2017-09-29 Meat is a unique biological material with a central importance in nutrition and health. *Advances in Meat Processing Technology* merges the expertise of meat scientists and food engineers in a holistic approach toward the processing of meat. The meat industry strives to deliver consistent, high quality and safe meat products. Readers can benefit from knowledge generated by meat science researchers by achieving a greater understanding of the nature of meat and the engineering technology required for meat processing. This book comprises 17 full chapters that provide up-to-date and fundamental information on current topics in meat processing. This includes novel technologies such as the application of pulsed electric field, meat stretching and shaping, ultrasound, and high pressure. In addition, analytical techniques such as Raman spectroscopy and NMR are enabling considerable advancement of knowledge in meat science and in meat processing. Written by world-renowned experts in their fields, this contemporary collective work assembles the state of current knowledge that is of importance to both industry and academia. **Blueprint**
