The Compatibility Gene Daniel M Davis, 2014-09-30 Short listed for the Society of Biology Book Award 2014 Long listed for the Royal Society Winton prize for science books 2014 In *The Compatibility Gene* leading scientist Daniel M Davis tells the story of the crucial genes that define our relationships our health and our individuality We each possess a similar set of around 25 000 human genes Yet a tiny distinctive cluster of these genes plays a disproportionately large part in how our bodies work These few genes argues Davis hold the key to who we are as individuals and our relationship to the world how we combat disease how our brains are wired how attractive we are even how likely we are to reproduce *The Compatibility Gene* follows the remarkable history of these genes discovery From the British scientific pioneers who struggled to understand the mysteries of transplants to the Swiss zoologist who devised a new method of assessing potential couples compatibility based on the smell of worn T shirts Davis traces a true scientific revolution in our understanding of the human body a global adventure spanning some sixty years Unusual results astonishing implications and ethical dilemmas *The Times* Packed with an insider s knowledge *New York Times* He makes immunology as fascinating to popular science readers as cosmology consciousness and evolution Steven Pinker An elegantly written unexpectedly gripping account Bill Bryson *Guardian Books of the Year* Daniel M Davis is director of research at the University of Manchester s Collaborative Centre for Inflammation Research and a visiting professor at Imperial College London He has published over 100 academic articles including papers in *Nature* and *Science* and *Scientific American* He has won the Oxford University Press Science Writing Prize and given numerous interviews for national and international media He was elected a Fellow of the Academy of Medical Sciences in 2011

The Compatibility Gene Daniel M. Davis, 2013-09-01 *The Compatibility Gene* takes readers on a global journey of discovery spanning 60 years involving scores of scientists and encompassing the history of transplants and immunology That journey has revealed astonishing links between who we are as individuals and our never ceasing struggle to survive disease Most of the 25 000 genes we possess are the same for all of us Compatibility genes are those that vary most from person to person and give each of us a unique molecular signature These genes determine both the extent to which we are susceptible to a vast range of illnesses and the different ways each of us fights disease In *The Compatibility Gene* distinguished immunologist Daniel Davis draws on new research to suggest a number of even more fascinating and controversial conclusions about compatibility genes that we find others more or less sexy according to their compatibility genes dating services are starting to match people in this way that the wiring between some neurons is kept or broken according to the activity of compatibility genes and that compatibility genes influence the chances of a couple having a successful pregnancy Profoundly personal life forming and life changing decisions appear to be governed by the actions of a few inherited genes Most importantly Davis proposes that because we each respond slightly differently to any particular disease in the not too distant future vaccines and other medications may be tailored to match our compatibility genes a

revolutionary breakthrough in the fight against disease Including vivid portraits of the scientists who worked tirelessly to unlock the secrets of compatibility genes as well as patients who survived disease due to lucky genetic inheritances The Compatibility Gene explains an aspect of human biology that will undoubtedly have profound impacts on medical practice in the 21st Century
