partnership with commercial farms and the appearance of new sensors on board UAVs crop duster airplanes and satellites such as radar technologies that allow daily remote data collection under cloudy skies are exciting and require more investigation In addition new equipment and sensors are enabling improved crop monitoring and land use mapping on a regional scale Recent advances in imaging and information technology have led to the massive production of digital images of plant specimens and living plants worldwide Computer vision and machine learning approaches are up and coming technologies to investigate and interpret digitized images of wild and domesticated taxa Deep learning technologies have been recently shown to achieve impressive performance on a variety of predictive tasks such as automated species identification trait detection and organ counting measurement and recognition The objective of this Research Topic is to explore how big data machine and deep learning algorithms are being applied to precision agriculture and plant health This topic will investigate how these tools could be used and improved in the future to aid food security mainly involving the integration of state of the art technologies We hope to increase the recognition and accessibility of AI ML tools in agricultural and plant research This Research Topic will bring together researchers from diverse fields and specializations such as plant bioinformatics computer engineering computer science agricultural engineering environmental engineering food engineering information technology and mathematics This Research Topic welcomes diverse types of articles including original research reviews and perspective papers Potential topics include but are not limited to Big data machine and deep learning for plant and fruit disease classification Features optimization for plant disease classification Classification of plant types using big data machine and deep learning Recognition of plant and fruit diseases using big data machine and deep learning On farm precision experimentation Monitoring and surveillance using hyperspectral images Monitoring crop areas Convolutional Neural Network based fruit and crop disease detection Fusion of fully connected layers for classification of plant disease Selection of optimal features for plant disease

Cross-Modal Learning: Adaptivity, Prediction and Interaction Jianwei Zhang, Stefan Wermter, Fuchun Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02

The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social

cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience
