Applied Data Analysis and Modeling for Energy Engineers and Scientists T. Agami Reddy, 2011-08-09. Applied Data Analysis and Modeling for Energy Engineers and Scientists fills an identified gap in engineering and science education and practice for both students and practitioners. It demonstrates how to apply concepts and methods learned in disparate courses such as mathematical modeling, probability, statistics, experimental design, regression, model building, optimization, risk analysis, and decision making to actual engineering processes and systems. The text provides a formal structure that offers a basic, broad, and unified perspective while imparting the knowledge, skills, and confidence to work in data analysis and modeling. This volume uses numerous solved examples, published case studies from the author's own research, and well-conceived problems in order to enhance comprehension levels among readers and their understanding of the processes along with the tools.

Introductory Statistics Neil A. Weiss, 2012. Using understanding statistics have become required skills in virtually every profession, every academic discipline. The aim of this book is to help students grasp statistical concepts, techniques, to present opportunities for applying them.

Translational Neurosurgery Adam E.M. Eltorai, Jeffrey A. Bakal, Maleeha Ahmad, 2025-11-18. Translational Neurosurgery provides a comprehensive overview reflecting the depth and breadth of the field of translational research focused on neurosurgery with input from a distinguished team of basic and clinical investigators. It covers the principles of evidence-based medicine and applies these principles to the design of translational investigations, helping researchers navigate challenging considerations in study design and implementation. This book is a valuable resource for neurosurgeons and neurosurgery investigators who want to understand more about translational research and also for basic scientists interested in translating their research into clinical practice. Focuses on the principles of evidence-based medicine and applies these principles to the design of translational investigations within neurosurgery. Provides a practical, straightforward approach that helps investigators navigate challenging considerations in study design and implementation. Includes valuable discussions of the critical appraisal of published studies in translational neurosurgery and provides specific examples from the recent literature.
