### The ITIL guiding principles

Guiding principle	Description
Focus on value	Everything that the organization does needs to create, directly or indirectly, a benefit to the organization. The focus on value principle encourages every organization, including the operations of customers and users. Do not just do things, do things with purpose and intention, and a focus on value. There is a link to the current service strategy, program, projects, and people that can be used to create the desired outcome. The current state should be investigated and assessed, clearly to determine the fully understood. Do not attempt to do everything at once. Start high, establish metrics, understand the status. By organizing work into smaller, manageable systems that can be completed and completed in a timely manner, it is more likely to create a change focus on each effort.
Start where you are	Recognize the current state, its strengths and weaknesses, and what you can build on. Start where you are, not where you want to be. Start where you are, not where you want to be. Start where you are, not where you want to be. Start where you are, not where you want to be.
Progress iteratively with feedback	Recognize that progress is made through small, frequent, and often visible changes. Do not wait until the end of the project to see if you have achieved the desired outcome. Start where you are, not where you want to be. Start where you are, not where you want to be. Start where you are, not where you want to be.

### Costs

Achieving desired outcomes requires resources (and therefore costs) which are associated with costs. Service providers help their customers to achieve outcomes and to design or take on some of the associated costs and risks. On the other hand, service providers can introduce costs and risks, and in some cases, can negatively affect some of the customer's outcomes after supporting others.

**Guerrilla Capacity Planning** Neil J. Gunther,2007-01-17 In these days of shortened fiscal horizons and contracted time to market schedules traditional approaches to capacity planning are often seen by management as tending to inflate their production schedules Rather than giving up in the face of this kind of relentless pressure to get things done faster Guerrilla Capacity Planning facilitates rapid forecasting of capacity requirements based on the opportunistic use of whatever performance data and tools are available in such a way that management insight is expanded but their schedules are not A key Guerrilla concept is tactical planning whereby short range planning questions and projects are brought up in team meetings such that management is compelled to know the answer and therefore buys into capacity planning without recognizing it as such Once you have your foot in the door capacity planning methods can be refined in an iterative cycle of improvement called The Wheel of Capacity Planning
