
Statistics Final Exam

Problem 1.

Determine whether the value given below is from a discrete or continuous data set.

In a test of method of gender selection, 668 couples used the XSORT method and 451 of them had baby girls.

A. A discrete data set because there are a finite number of possible values.

Problem 2.

Use the data consisting of IQ score and brain volume (cm^3)

The regression equation is $\hat{y} = 101.32160 + 0.00669x$

(if not try with $y = 1074.84017 + 1.01199x$)

Problem 3.

Refer to the accompanying data set and use the 25 home voltage measurements to construct a frequency distribution with five classes. Begin with a lower class limit of 122.6 volts, and use a class width of 0.2 volt. Does the result appear to have a normal distribution? Why or why not?

Complete the frequency distribution below.

Voltage (volts)	Frequency
122.6 - 122.7	5
122.8 - 122.9	6
123.0 - 123.1	4
123.2 - 123.3	5
123.4 - 123.5	5

Does the result appear to have a normal distribution? Why or why not?

A. No, because the frequencies are roughly equal across the voltage classes.
