Decision trees are a powerful tool for classification and regression tasks. They are easy to interpret and can handle both numerical and categorical data.

#### 1.1.1.1.1.1.5. Decision Trees

A decision tree is a flowchart representing a supervised learning model. It starts with a root node and branches out based on feature values. Each internal node represents a decision based on a feature value. The branches lead to leaf nodes, which represent the predicted class or value. Decision trees are easy to interpret and can handle both numerical and categorical data. They are also robust to outliers and missing data. However, they can be prone to overfitting, especially with large datasets. Regularization techniques like pruning can help mitigate this.
