An efficient solution procedure for elastohydrodynamic contact problems considering structural dynamics Schmidt, Jan Henrik, 2019-01-14 This work presents an efficient solution procedure for the elastohydrodynamic EHD contact problem considering structural dynamics. The contact bodies are modeled using reduced finite element models. Singly diagonal implicit Runge Kutta SDIRK methods are used for adaptive time integration. The structural model is coupled with the nonlinear Reynolds Equation using a monolithic coupling approach. Finally a reduced order model of the complete nonlinear coupled problem is constructed.

Problems And Solutions In Differential Geometry, Lie Series, Differential Forms, Relativity And Applications Willi-hans Steeb, 2017-10-20 This volume presents a collection of problems and solutions in differential geometry with applications. Both introductory and advanced topics are introduced in an easy to digest manner with the materials of the volume being self contained. In particular curves, surfaces, Riemannian and pseudo Riemannian manifolds, Hodge duality, operator, vector fields and Lie series, differential forms, matrix valued differential forms, Maurer Cartan form and the Lie derivative are covered. Readers will find useful applications to special and general relativity, Yang Mills theory, hydrodynamics and field theory. Besides the solved problems, each chapter

contains stimulating supplementary problems and software implementations are also included The volume will not only benefit students in mathematics applied mathematics and theoretical physics but also researchers in the field of differential geometry

Formulation and Numerical Solution of Quantum Control Problems Alfio Borzi, Gabriele Ciaramella, Martin Sprengel, 2017-07-06 This book provides an introduction to representative nonrelativistic quantum control problems and their theoretical analysis and solution via modern computational techniques The quantum theory framework is based on the Schrödinger picture and the optimization theory which focuses on functional spaces is based on the Lagrange formalism The computational techniques represent recent developments that have resulted from combining modern numerical techniques for quantum evolutionary equations with sophisticated optimization schemes Both finite and infinite dimensional models are discussed including the three level Lambda system arising in quantum optics multispin systems in NMR a charged particle in a well potential Bose Einstein condensates multiparticle spin systems and multiparticle models in the time dependent density functional framework This self contained book covers the formulation analysis and numerical solution of quantum control problems and bridges scientific computing optimal control and exact controllability optimization with differential models and the sciences and engineering that require quantum control methods

Waves And Rays In Seismology: Answers To Unasked Questions (Third Edition) Michael A Slawinski, 2020-11-20 This is a book on seismology dealing with advanced aspects of wave propagation in complex media It can also be viewed as a book on mathematical modelling wherein the accuracy of describing seismic phenomena exemplifies the modelling itself The book gives an insight into the power of abstractness by applying the same mathematical methods and strategies to solve a variety of different physical problems This book covers a broad range of topics in an advanced yet accessible manner Each chapter is accompanied by a number of solved exercises which render the book convenient for a lecturer and facilitate its use for an independent study The details of mathematical methods are discussed in the appendices which form a substantial portion of the book

Handbook of Computability and Complexity in Analysis Vasco Brattka, Peter Hertling, 2021-06-04 Computable analysis is the modern theory of computability and complexity in analysis that arose out of Turing's seminal work in the 1930s This was motivated by questions such as which real numbers and real number functions are computable and which mathematical tasks in analysis can be solved by algorithmic means Nowadays this theory has many different facets that embrace topics from computability theory algorithmic randomness computational complexity dynamical systems fractals and analog computers up to logic descriptive set theory constructivism and reverse mathematics In recent decades computable analysis has invaded many branches of analysis and researchers have studied computability and complexity questions arising from real and complex analysis functional analysis and the theory of differential equations up to geometric measure theory and topology This handbook represents the first coherent cross section through most active research topics on the more theoretical side of the field It contains 11 chapters grouped into parts on computability in analysis complexity dynamics and randomness and

constructivity logic and descriptive complexity All chapters are written by leading experts working at the cutting edge of the respective topic Researchers and graduate students in the areas of theoretical computer science and mathematical logic will find systematic introductions into many branches of computable analysis and a wealth of information and references that will help them to navigate the modern research literature in this field
