

Chapter 2 Factors Affecting the Selection of Construction Equipment

2. Factors Affecting the Selection of Construction Equipment

2.1. General Information:

A problem which frequently confronts a contractor as he plans to construct a project is **the selection of the most suitable equipment**. He should consider the money spent for equipment as an investment which he can expect to recover with profit during the useful life of the equipment. A contractor does not pay for the construction equipment; the equipment must pay for itself by earning for the contractor more money than it cost.

A contractor can never afford to own all types or sizes of equipment that might be used for the kind of work he does. It may be possible to determine what kind and size of equipment seem most suitable for a given project, but this information will not necessarily justify the purchase of the equipment, he may own a type of equipment that is less desirable than the proposed one, but, it may be of benefit and less expensive than the proposed one.

"Anytime a unit of equipment will pay for itself on work certain to be done, it is a good business to purchase it. For example, if a unit of equipment costing \$25000 will save \$50000 on a project, a contractor is justified in purchasing it regardless of the prospects of using it on additional projects, or the prospects of selling it at a favorable price when the project is finished."

2.2. Standard Types of Equipment:

There is no clear definition of standard equipment. Equipment that is standard for one contractor may be special for another. But it may be defined as **the equipment that can be used economically on more than one project, its repair parts may be obtained more quickly, and it can be easily disposed of at more favorable price.**

2.3. Special Equipment:

It is the equipment that is manufactured for use on single project or for a special type of operation. Such equipment may not be suitable or economical for use on other project.
