International Arbitration Audley William Sheppard, Chiann Bao, 2025-12-15. International arbitration is built not only on legal norms and procedural frameworks but by the individuals who craft, interpret, and implement them. This book explores how human qualities such as perception, reasoning, and culture inform the daily practice of international arbitration. The volume gathers contributions presented at the twenty-sixth Congress of the International Council for Commercial Arbitration (ICCA) held in Hong Kong in May 2024 under the theme "International Arbitration: A Human Endeavour." Framed as both a statement and a provocation, the theme invites critical reflection on the role of the individual in a system often portrayed as neutral, objective, and abstract. Across fifty-one chapters from fifteen thematic panels, the book explores questions at the heart of arbitral practice: Unveiling the Human Dimension in International Arbitration; The Arbitrator Decision Making and Biases; Sociology and Education; Judging the New York Convention; Culture, Localisation, and Regionalism; The Advocate: Procedures and Behaviours; It's Not Just Semantics: The Hidden Power of Language; Interpersonal Conduct and Ethics; Dispute Resolution and the Global Community; Working in an Adversarial Environment; Costs and Economics and International Arbitration: An AI Endeavour. Set against a backdrop of global change and increased attention to inclusivity, transparency, and accountability in arbitration, the chapters offer timely and candid reflections on the lived experience of arbitration. They examine how the human element continues to shape arbitral justice today but also how it may be redefined in a future increasingly influenced by social and technological changes. Together, the contributions paint a picture of international arbitration as a profoundly human endeavour shaped by those who practice it and those who will redefine its future.

Proceedings of the Twelfth National Conference on Artificial Intelligence American Association for Artificial Intelligence, 1994. *Artificial Intelligence and Universal Values* Jay Friedenber, 2024-07-14. The field of value alignment or more broadly machine ethics is becoming increasingly important as artificial intelligence developments accelerate. By alignment we mean giving a generally intelligent software system the capability to act in ways that are beneficial or at least minimally harmful to humans. There are a large number of techniques that are being experimented with but this work often fails to specify what values exactly we should be aligning. When making a decision, an agent is supposed to maximize the expected utility of its value function. Classically, this has been referred to as happiness but this is just one of many things that people value. In order to resolve this issue, we need to determine a set of human values that represent humanity's interests. Although this problem might seem intractable, research shows that people of various cultures and religions actually share more in common than they realize. In this book, we review world religions, moral philosophy, and evolutionary psychology to elucidate a common set of shared values. We then show how these values can be used to address

the alignment problem and conclude with problems and goals for future research The key audience for this book will be researchers in the field of ethics and artificial intelligence who are interested in or working on this problem These people will come from various professions and include philosophers computer programmers and psychologists as the problem itself is multi disciplinary **The Software Encyclopedia** ,1986 *Popular Photography* ,1992-04 **Computerworld**

Knowledge-based Systems for General Reference Work John V. Richardson,1995 By focusing on knowledge based systems technology the primary purpose and goal of this book is to improve the quality of reference service rendered in libraries Within reference service this book examines question answering a complex and difficult task For those interested in the theoretical aspects of reference work they have to look no further than the first chapter In addition the book features theoretical chapters on modelling the reference transaction a chapter on the logic of ready reference work and a chapter on the appropriate criteria to apply in selecting an expert system shell Several practical chapters focus on what KBS work has

already been done in the field and evaluate nearly fifty expert system development shells so that readers can select the most appropriate shell for their domain The subtitle of the book is applications problems and progress in regard to expert systems in reference work Applications are covered most clearly in chapter 8 which reviews the more than extant prototypes Chapter 3 covers what is feasible chapter 4 models the reference transaction and chapter 7 covers interface issues so that future applications can be more successful Problems are covered throughout the book starting with chapter 1 which discusses the traditional emphasis on reference sources It argues that the field needs to shift toward procedural knowledge related to work in reference departments The chapter on expert system feasibility reveals that there are alternative ways of conceptualizing the intellectual work of an expert and of course chapter 9 directly points out limitations in extant systems Encouraging words occur in chapter 1 about the shift to a balanced or complete paradigm for doing reference work Similarly the chapter on modelling is optimistic in that reference work can be modelled and systems implemented which act like human experts The final chapter tries to avoid the technological optimism inherent in many books on expert systems by identifying the near term factors which will influence the development of expert systems Key Features Historical background presenting the field s paradigmatic thinking Decision trees for basic formats of reference material Flowchart modelling the reference transaction Reviews of more than fifty extant KBS in general reference environments Evaluative criteria on more than forty expert system shells
