Most of the initial information provided is just a guide and derived from talking with chassis builders, successful racers, conducting years of research, attending various chassis schools, and our own trial and error at the track. Not all racers will agree with everything in this guide, but we believe in it, and reading and applying the information will help you to maximize your racing results. This book will teach you how setup changes on an IMCA Sportmod will affect the car's handling on the track. There is no one change that will make every car fast, but understanding how each change affects a car's handling is the first step in getting faster and making it to victory lane. The key to being successful on

the race track is getting your setup as close as possible in the shop adjusting your cars handling to the current track conditions and then adjusting your driving style to maximize traction through all areas of the race track The driver job is to maximize the limited traction a dirt car has on the dynamic changing race track conditions
