Wireless Transceiver Design Ariel Luzzatto, Motti Haridim, 2016-09-14 Building upon the success of the first edition 2007 Wireless Transceiver Design 2nd Edition is an accessible textbook that explains the concepts of wireless transceiver design in detail The architectures and the detailed design of both traditional and advanced all digital wireless transceivers are discussed in a thorough and systematic manner while carefully watching out for clarity and simplicity Many practical examples and solved problems at the end of each chapter allow students to thoroughly understand the mechanisms involved to build confidence and enable them to readily make correct and practical use of the applicable results and formulas From the instructors perspective the book will enable the reader to build courses at different levels of depth starting from the basic understanding whilst allowing them to focus on particular elements of study In addition to numerous fully solved exercises the authors include actual exemplary examination papers for instructors to use as a reference format for student evaluation The new edition has been adapted with instructors lecturers graduate undergraduate students and RF engineers in mind Non RF engineers looking to acquire a basic understanding of the main related RF subjects will also find the book invaluable

Self-Sufficiency of an Autonomous Reconfigurable Modular Robotic Organism Raja Humza Qadir, 2014-09-25 This book describes how the principle of self sufficiency can be applied to a reconfigurable modular robotic organism It shows the design considerations for a novel REPLICATOR robotic platform both hardware and software featuring the behavioral characteristics of social insect colonies Following a comprehensive overview of some of the bio inspired techniques already available and of the state of the art in reconfigurable modular robotic systems the book presents a novel power management system with fault tolerant energy sharing as well as its implementation in the REPLICATOR robotic modules In addition the book discusses for the first time

the concept of artificial energy homeostasis in the context of a modular robotic organism and shows its verification on a custom designed simulation framework in different dynamic power distribution and fault tolerance scenarios This book offers an ideal reference guide for both hardware engineers and software developers involved in the design and implementation of autonomous robotic systems

Smart Intelligent Aircraft Structures (SARISTU) Piet Christof Wölcken, Michael Papadopoulos, 2015-09-04 The book includes the research papers presented in the final conference of the EU funded SARISTU Smart Intelligent Aircraft Structures project held at Moscow Russia between 19-21 of May 2015 The SARISTU project which was launched in September 2011 developed and tested a variety of individual applications as well as their combinations With a strong focus on actual physical integration and subsequent material and structural testing SARISTU has been responsible for important progress on the route to industrialization of structure integrated functionalities such as Conformal Morphing Structural Health Monitoring and Nanocomposites The gap and edge free deformation of aerodynamic surfaces known as conformal morphing has gained previously unrealized capabilities such as inherent de-icing erosion protection and lightning strike protection while at the same time the technological risk has been greatly reduced Individual structural health monitoring techniques can now be applied at the part manufacturing level rather than via extending an aircraft's time in the final assembly line And nanocomposites no longer lose their improved properties when trying to upscale from neat resin testing to full laminate testing at element level As such this book familiarizes the reader with the most significant developments achievements and key technological steps which have been made possible through the four year long cooperation of 64 leading entities from 16 different countries with the financial support of the European Commission

Multidisciplinary Approaches to The FLASH Radiotherapy Fabio Di Martino, Vincenzo Patera, Pierre Montay-Gruel, Valentina Tozzini, Emanuele Scifoni, Francesco Romano, Arash Darafsheh, 2024-06-28 Radiotherapy RT is a cornerstone of cancer treatment being routinely used for approximately half of cancer patients in high income countries Despite the extensive use of RT for over 60 years its toxicity on normal tissues often limits the treatment of radioresistant tumors and is responsible for significant decrease in patient's quality of life However it was recently established that ultra high dose rate UHDR irradiation induces significantly less normal tissues toxicities while keeping similar antitumor effect compared to conventional dose rate irradiation This so called FLASH Effect was

demonstrated in vivo on different animal models and different organs by delivering the total amount of radiation dose in a very short time usually
