Software Engineering with Reusable Components Johannes

Sametinger,2013-04-17 Software is rarely built completely from scratch To a great extent existing software documents source code design documents etc are copied and adapted to fit new requirements Yet we are far from the goal of making reuse the standard approach to software development Software reuse is the process of creating software systems from existing software rather than building them from scratch Software reuse is still an emerging discipline It appears in many different forms from ad hoc reuse to systematic reuse and from white box reuse to black box reuse Many different products

for reuse range from ideas and algorithms to any documents that are created during the software life cycle Source code is most commonly reused thus many people misconceive software reuse as the reuse of source code alone Recently source code and design reuse have become popular with object oriented class libraries application frameworks and design patterns Software components provide a vehicle for planned and systematic reuse The software community does not yet agree on what a software component is exactly Nowadays the term component is used as a synonym for object most of the time but it also stands for module or function Recently the term component based or component oriented software development has become popular In this context components are defined as objects plus some thing What something is exactly or has to be for effective software development remains yet to be seen However systems and models are emerging to support that notion

Software Engineering Practice Thomas B. Hilburn, Massood Towhidnejad, 2020-12-15 This book is a broad discussion covering the entire software development lifecycle It uses a comprehensive case study to address each topic and features the following A description of the development by the fictional company Homeowner of the DigitalHome DH System a system with smart devices for controlling home lighting temperature humidity small appliance power and security A set of scenarios that provide a realistic framework for use of the DH System material Just in time training each chapter includes mini tutorials introducing various software engineering topics that are discussed in that chapter and used in the case study A set of case study exercises that provide an opportunity to engage students in software development practice either individually or in a team environment Offering a new approach to learning about software engineering theory and practice the text is specifically designed to Support teaching software engineering using a comprehensive case study covering the complete software development lifecycle Offer opportunities for students to actively learn about and engage in software engineering practice Provide a realistic environment to study a wide array of software engineering topics including agile development Software Engineering Practice A Case Study Approach supports a student centered active learning style of teaching The DH case study exercises provide a variety of opportunities for students to engage in realistic activities related to the theory and practice of software engineering The text uses a fictitious team of software engineers to portray the nature of software engineering and to depict what actual engineers do when practicing software engineering All the DH case study exercises can be used as team or group exercises in collaborative learning Many of the exercises have specific goals related to team building and teaming skills The text also can be used to support the professional development or certification of practicing software engineers The case study exercises can be integrated with presentations in a workshop or short course for professionals
