Software Requirements Karl E. Wieggers,Joy Beatty,2013-08-15 Now in its third edition this classic guide to software requirements engineering has been fully updated with new topics examples and guidance Two leaders in the requirements community have teamed up to deliver a contemporary set of practices covering the full range of requirements development and management activities on software projects Describes practical effective field tested techniques for managing the requirements engineering process from end to end Provides examples demonstrating how requirements good practices can lead to fewer change requests higher customer satisfaction and lower development costs Fully updated with contemporary examples and many new practices and techniques Describes how to apply effective requirements practices to agile projects and numerous other special project situations Targeted to business analysts developers project managers and other software project stakeholders who have a general understanding of the software development process Shares the insights gleaned from the authors extensive experience delivering hundreds of software requirements training courses presentations and webinars New chapters are included on specifying data requirements writing high quality functional requirements and requirements reuse Considerable depth has been added on business requirements elicitation techniques and nonfunctional requirements In addition new chapters recommend effective requirements practices for various special project situations including enhancement and replacement packaged solutions outsourced business process automation analytics and reporting and embedded and other real time systems projects *Modeling and Simulation-Based Data Engineering* Bernard P.

Zeigler,Phillip E Hammonds,2007-08-07 Data Engineering has become a necessary and critical activity for business engineering and scientific organizations as the move to service oriented architecture and web services moves into full swing Notably the US Department of Defense is mandating that all of its agencies and contractors assume a defining presence on the Net centric Global Information Grid This book provides the first practical approach to data engineering and modeling

which supports interoperability with consumers of the data in a service oriented architectures SOAs Although XML eXtensible Modeling Language is the lingua franca for such interoperability it is not sufficient on its own The approach in this book addresses critical objectives such as creating a single representation for multiple applications designing models capable of supporting dynamic processes and harmonizing legacy data models for web based co existence The approach is based on the System Entity Structure SES which is a well defined structure methodology and practical tool with all of the functionality of UML Unified Modeling Language and few of the drawbacks The SES originated in the formal representation of hierarchical simulation models So it provides an axiomatic formalism that enables automating the development of XML dtDs and schemas composition and decomposition of large data models and analysis of commonality among structures Zeigler and Hammond include a range of features to benefit their readers Natural language graphical and XML forms of SES specification are employed to allow mapping of legacy meta data Real world examples and case studies provide insight into data engineering and test evaluation in various application domains Comparative information is provided on concepts of ontologies modeling and simulation introductory linguistic background and support options enable programmers to work with advanced tools in the area The website of the Arizona Center for Integrative Modeling and Simulation co founded by Zeigler in 2001 provides links to downloadable software to accompany the book The only practical guide to integrating XML and web services in data engineering Introduces linguistic levels of interoperability for effective information exchange Covers the interoperability standards mandated by national and international agencies Complements Zeigler s classic THEORY OF MODELING AND SIMULATION
