Financial Security and Household Life Insurance Joanna Dębicka, Anna Jędrzychowska, 2025-12-15 This book offers a comprehensive understanding of a novel approach to household security following the loss of an adult member introducing the concept of Bridging Household Life Insurance It addresses the financial and functional instability that families face after the death of a spouse or partner by proposing a new type of insurance that compensates for the loss of unpaid domestic labour such as caregiving household management and other essential non market activities Unlike traditional life insurance the proposed contract focuses not only on income replacement but also on maintaining household stability by covering the cost of services that become necessary due to the loss of a family member's contributions Thus it helps ensure continuity in everyday life reducing the burden on surviving family members and helping them adapt to new circumstances without significant disruptions The book develops an advanced multistate model that takes into account the variability of the household life cycle not just the future lifetime of the insured persons which allows for more accurate contract valuation Comparative analyses across EU countries are used to examine the impact of socio demographic factors and the COVID 19 pandemic on the premium amount In addition the book offers practical recommendations for implementing this insurance on the market and considers its applications in social and demographic policy national accounts and the fields of law and economics The work enriches the existing literature with new tools and concepts that researchers scholars actuaries and practitioners can use to manage risk better and protect households against financial instability

**Insurance Planning Models: Price Competition And Regulation Of Financial Stability** Vsevolod Malinovskii, 2021-08-13 Insurance Planning Models Price Competition and Regulation of Financial Stability is an exciting new book that takes readers inside the secrets of internal organization of the modern general insurance business Many people know that it is subject to intensive state regulation whereby the purpose is to maintain long term efficiency honesty security and stability in the interest and for the protection of policyholders However except for knowing that the insurance system is regulated by intensive calculations that the insurance companies have different positions on the market that they pursue different goals and even compete with each other and that one of the tools of this competition is the policy price not so many people know how to achieve these deserving goals In developing quantitative recommendations and directives to competing insurers regulators rely on certain models In the 1900s such

models were proposed They were useful for an insight into the probabilistic nature of the insurance process but not for direct application to practically meaningful problems of insurance regulation This book is your guide to the rigorously constructed long term dynamic models with the aim to improve regulatory methods and develop quantitative recommendations using both analytical calculations and computer simulation It is addressed to a wide range of readers including interested policyholders economists whose interest lies in insurance management and regulation and mathematicians wishing to expand the scope of application for their knowledge This book is devoted to certain issues that are either not sufficiently presented or even absent in the literature It is an attempt to penetrate from the standpoint of mathematical modeling into the goals which face insurance regulators and contending company managers for preventing insolvencies or even crises pertinent to badly regulated complex reflexive systems It offers rigorous probabilistic models of long term insurance business based on the laws of mass phenomena They mitigate deficiencies of oversimplified risk models The book presents advances in probabilistic techniques designed to seek quantitative rather than qualitative directives and recommendations regarding safe control aiming to achieve different business goals
