Programming Languages and Systems David Sands,2003-06-29 ETAPS 2001 was the fourth instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprised ve conferences FOSSACS FASE ESOP CC TACAS ten satellite workshops CMCS ETI Day JOSES LDTA MMAABS PFM ReMiS UNIGRA WADT WTUML seven invited lectures a debate and ten tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

**Handbook of Graph Grammars and Computing by Graph Transformation** Hartmut Ehrig, 1997 Graph grammars originated in the late 60s motivated by considerations about pattern recognition and compiler construction Since then the list of areas which have interacted with the development of graph grammars has grown quite impressively Besides the aforementioned areas it includes software specification and development VLSI layout schemes database design modeling of concurrent systems massively parallel computer architectures logic programming computer animation developmental biology music composition visual languages and many others The area of graph grammars and graph transformations generalizes formal language theory based on strings and the theory of term rewriting based on trees As a matter of fact within the area of graph grammars graph transformation is considered a fundamental computation paradigm where computation includes specification programming and implementation Over the last three decades graph grammars have developed at a steady pace into a theoretically attractive and important for applications research field Volume 2 of the indispensable Handbook of Graph Grammars and Computing by Graph Transformations considers applications to functional languages visual and object oriented languages software engineering mechanical engineering chemical process engineering and images It also presents implemented specification languages and tools and structuring and modularization concepts for specification languages The contributions have been written in a tutorial survey style by the top experts in the corresponding areas This volume is accompanied by a CD Rom containing implementations of specification environments based on graph transformation systems and tools whose implementation is based on the use of graph transformation systems [Mathematics of Program Construction](#) Dexter Kozen, Carron Shankland, 2004-09-21 This volume contains the proceedings of MPC 2004 the Seventh International Conference on the Mathematics of Program Construction This series of conferences aims to promote the development of mathematical principles and techniques that are demonstrably useful in the process of constructing computer

grams whether implemented in hardware or software. The focus is on techniques that combine precision with conciseness enabling programs to be constructed by formal calculation. Within this theme the scope of the series is very diverse including programming methodology, program specification and transformation, programming paradigms, programming calculi and programming language semantics. The quality of the papers submitted to the conference was in general very high and the number of submissions was comparable to that for the previous conference. Each paper was refereed by at least four and often more committee members. This volume contains 19 papers selected for presentation by the program committee from 37 submissions as well as the abstract of one invited talk titled Static Checking for Java by Greg Nelson, Imaging Systems Department, HP Labs, Palo Alto, California. The conference took place in Stirling, Scotland. The previous six conferences were held in 1989 in Twente, The Netherlands; in 1992 in Oxford, UK; in 1995 in Kloster Irsee, Germany; in 1998 in Marstrand near Göteborg, Sweden; in 2000 in Ponte de Lima, Portugal; and in 2002 in Dagstuhl, Germany. The proceedings of these conferences were published as LNCS 375, 669, 947, 1422, 1837, and 2386 respectively.

**Rewriting Techniques and Applications** Robert Nieuwenhuis, 2007-03-06. The refereed proceedings of the 14th International Conference on Rewriting Techniques and Applications, RTA 2003, held in Valencia, Spain, in June 2003. The 26 revised regular papers and 6 system descriptions presented together with 3 invited contributions were carefully reviewed and selected from 61 submissions. All current aspects of rewriting are addressed.

Static Analysis Agostino Cortesi, Gilberto File, 2003-07-31. Static analysis is increasingly recognized as a fundamental research area aimed at studying and developing tools for high performance implementations and verification systems for all programming language paradigms. The last two decades have witnessed substantial developments in this field ranging from theoretical frameworks to design, implementation and application of analyzers in optimizing compilers. Since 1994 SAS has been the annual conference and forum for researchers in all aspects of static analysis. This volume contains the proceedings of the 6th International Symposium on Static Analysis, SAS 99, which was held in Venice, Italy, on 22-24 September 1999. The previous SAS conferences were held in Namur, Belgium; Glasgow, UK; Aachen, Germany; Paris, France; and Pisa, Italy. The program committee selected 18 papers out of 42 submissions on the basis of at least three reviews. The resulting volume offers to the reader a complete landscape of the research in this area. The papers contribute to the following topics: foundations of static analysis; abstract domain design and applications of static analysis to different programming paradigms; concurrent, synchronous, imperative, object-oriented, logical and functional. In particular, several papers use static analysis for obtaining state space reduction in concurrent systems. New application fields are also addressed such as the problems of security and secrecy.

We also consider extending the logic with disjunction We then describe how to extend the simply typed lambda calculus with lazy algebraic datatypes A new construction of lattices of strictness properties of such datatypes is described This arises from the characterisation of the solutions to the recursive domain equations associated with these types as initial algebras Next we consider first order ML style polymorphism and show how Wadler s theorems for free parametricity results may be obtained from a simple extension of the semantics of the monomorphic language We then prove a polymorphic invariance result relating the derivable strictness properties of different substitution instances of polymorphic terms      Programming Languages and Dimensions Andrew Kennedy,1996 Abstract Scientists and engineers must ensure that the equations and formulae which they use are dimensionally consistent but existing programming languages treat all numeric values as dimensionless This thesis investigates the extension of programming languages to support the notion of physical dimension A type system is presented similar to that of the programming language ML but extended with polymorphic dimension types An algorithm which infers most general dimension types automatically is then described and proved correct The semantics of the language is given by a translation into an explicitly typed language in which dimensions are passed as arguments to functions The operational semantics of this language is specified in the usual way by an evaluation relation defined by a set of rules This is used to show that if a program is well typed then no dimension errors can occur during its evaluation More abstract properties of the language are investigated using a denotational semantics these include a notion of invariance under changes in the units of measure used analogous to parametricity in the polymorphic lambda calculus Finally the dissertation is summarised and many possible directions for future research in dimension types and related type systems are described      **Algebra of Programming** Richard Bird,Oege de Moor,1997 Describing an algebraic approach to programming based on a categorical calculus of relations this book is suitable for the derivation of individual programs and for the study of programming principles in general      *ACM SIGPLAN notices* ,1991      *Proceedings of the ...
