

Electromagnetic waves
An electric and magnetic wave packet or photon that can travel through the space.

Unpolarised waves
When the vibrations change from one plane to another.

Longitudinal waves
Waves with a direction of vibration parallel to the direction of propagation of the waves.

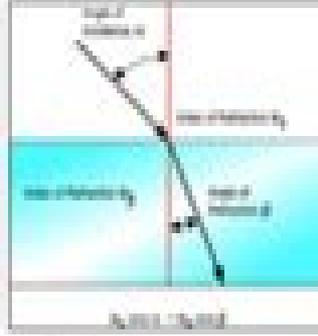

Polarised waves
Transverse waves that vibrate in one plane only.

Transverse waves
Waves with a direction of vibration perpendicular to the direction of propagation of the waves.

Refraction
Change of direction of a wave when it crosses a boundary where its speed changes.

Wavefronts
Lines of constant phase (e.g., wavefronts).

	Stationary waves	Progressive waves
Frequency	All particles except those at the nodes vibrate at the same frequency.	All particles vibrate at the same frequency.
Amplitude	The amplitude varies from zero at the nodes to a maximum at the antinodes.	The amplitude is the same for all particles.
Phase difference between two particles	Equal to $n\pi$, where n is the number of nodes between the two particles.	Equal to $2\pi x/\lambda$, where x = distance apart and λ is the wavelength.

The first harmonic

- The first harmonic pattern of vibration is seen at the lowest possible frequency that gives a pattern.
- The wavelength of the waves that form this pattern, the first harmonic, wavelength, $\lambda = 2L$.
- The first harmonic frequency $f = v/\lambda = v/2L$, where v is the speed of the progressive waves on the wire.

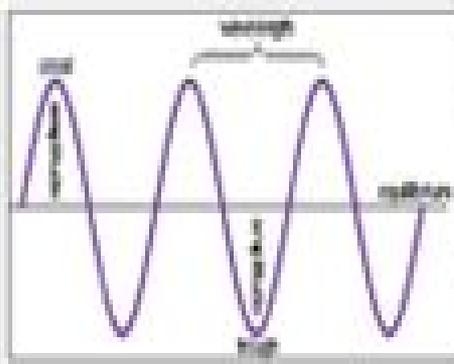

The second harmonic

- The second harmonic, is where there is a node at the middle, so the string is in two loops.
- The frequency of the second harmonic vibrations $f = v/\lambda = v/L = 2f_1$.

The third harmonic

- The third harmonic, is where there are nodes at a distance of $L/3$ from either end and an antinode at the middle.
- The frequency of the third harmonic vibrations $f = v/\lambda = 3v/2L = 3f_1$.

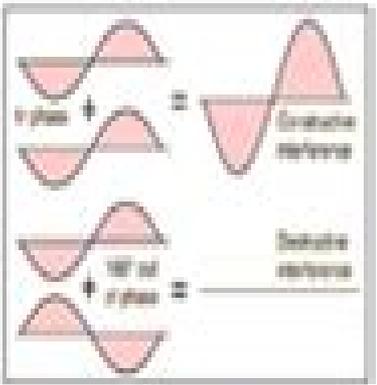

The principle of superposition states that when two waves meet, the total displacement at a point is equal to the sum of the individual displacements at that point.

Superposition
The effect of two waves adding together when they meet.

Coherent
Two sources of waves are coherent if they emit waves with a constant phase difference.

Stationary waves
Wave pattern with nodes and antinodes formed when two or more progressive waves of the same frequency and amplitude pass through each other.

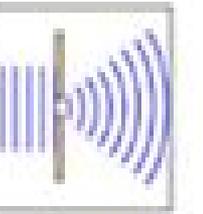

Interference
Formation of points of cancellation and reinforcement where two coherent waves pass through each other.

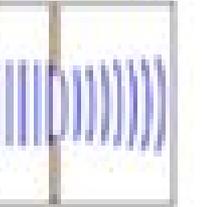

Progressive waves
Waves which travel through a substance or through space if electromagnetic.

4. Waves

Diffraction
The spreading of waves when they pass through a gap or round an obstacle. X-ray diffraction is used to determine the structure of crystals, metals and long molecules.

- The time taken for a wave to travel along the string and back is $t = 2L/v$, where v is the speed of the waves on the string.
- The time taken for the vibrator to pass through a whole number of cycles = nt .
- It can be shown that the first harmonic frequency f depends on the tension T in the wire and its mass per unit length μ according to the equation $f = (3/2L)^{1/2} (T/\mu)^{1/2}$.

O Level Physics Revision Waves Optics:

Thank you definitely much for downloading **O Level Physics Revision Waves Optics**. Maybe you have knowledge that, people have seen numerous periods for their favorite books with this O Level Physics Revision Waves Optics, but stop going on in harmful downloads.

Rather than enjoying a fine ebook when a cup of coffee in the afternoon, otherwise they juggle like some harmful virus inside their computer. **O Level Physics Revision Waves Optics** is open in our digital library with an online permission to it is set as public correspondingly you can download it instantly. Our digital library saves in multipart countries, allowing you to get the most less latency time to download any of our books taking into consideration this one. Merely said, the O Level Physics Revision Waves Optics is universally compatible similar to any devices to read.
