

Basic Petroleum Engineering Practices

OVERVIEW

This course is far more than an introduction to petroleum engineering and certainly is not a superficial presentation of the technology of the industry. Its purpose is to develop an understanding of the technology and its applications at an engineer's level, and the confidence and professional enthusiasm which comes with that understanding. The course has had a revolutionary effect on training programs for many major oil and service companies by making specialized training that follows far more effective. Participants enter those specialized programs with a depth of understanding of that particular technology and relation to other classic and new technologies of the industry. The course focuses on the field and application approach, and includes classroom exercises, fundamental engineering problems, and basic field exercises.
