Kuznetsova, 2014-10-15 This edited volume is a definitive text on adaptive clinical trial designs from creation and customization to utilization As this book covers the full spectrum of topics involved in the adaptive designs arena it will serve as a valuable reference for researchers working in industry government and academia The target audience is anyone involved in the planning and execution of clinical trials in particular statisticians clinicians pharmacometricians clinical operation specialists drug supply managers and infrastructure providers In spite of the increased efficiency of adaptive trials in saving costs and time ultimately getting drugs to patients

sooner their adoption in clinical development is still relatively low One of the chief reasons is the higher complexity of adaptive design trials as compared to traditional trials Barriers to the use of clinical trials with adaptive features include the concerns about the integrity of study design and conduct the risk of regulatory non acceptance the need for an advanced infrastructure for complex randomization and clinical supply scenarios change management for process and behavior modifications extensive resource requirements for the planning and design of adaptive trials and the potential to relegate key decision makings to outside entities There have been limited publications that address these practical considerations and recommend best practices and solutions This book fills this publication gap providing guidance on practical considerations for adaptive trial design and implementation The book comprises three parts Part I focuses on practical considerations from a design perspective whereas Part II delineates practical considerations related to the implementation of adaptive trials Putting it all together Part III presents four illustrative case studies ranging from description and discussion of specific adaptive trial design considerations to the logistic and regulatory issues faced in trial implementation Bringing together the expertise of leading key opinion leaders from pharmaceutical industry academia and regulatory agencies this book provides a balanced and comprehensive coverage of practical considerations for adaptive trial design and implementation

Efficacy and Mechanism of Herbal Medicines and Their Functional Compounds in Preventing and Treating Cardiovascular Diseases and Cardiovascular Disease Risk Factors, volume II Qing Yong He, Yu-Qing Zhang, Zhongfeng Li, Chen Huei Leo, Jie Wang, Kuo Gao, Jian Zhang, Tiantian Menghang, 2026-01-07 This Research Topic is part of a series with Efficacy and Mechanism of Herbal Medicines and Their Functional Compounds in Preventing and Treating Cardiovascular Diseases and Cardiovascular Disease Risk Factors According to the World Health Organization WHO cardiovascular diseases CVDs are one of the major health challenges globally Principally these conditions include heart failure hypertension stroke atherosclerosis coronary heart disease cerebrovascular disease peripheral arterial disease rheumatic heart disease congenital heart disease etc CVDs are the leading cause of death globally In 2015 an estimated 17.7 million people died from CVD related conditions representing 31% of global deaths It is estimated that almost 23.6 million people will die from CVDs by 2030 Hence the prevention and management of CVDs are essential for health care systems Several risk factors including hyperglycemia dyslipidemia hypertension overweight obesity and inflammation are suggested to play substantial roles in the onset and progression of CVDs In this regard pharmacological and lifestyle modification approaches are recommended for modifying CVD risk factors However many effective pharmacological agents cause side effects and adhering to lifestyle modifications is difficult for many people Given the financial burden of CVDs and the side effects of synthetic substances used for CVD treatment the discovery of new and efficacious treatments for CVD and CVD risk factors is urgently needed

Herbal medicine has been widely used to treat and prevent various diseases for thousands of years worldwide with some Asian traditions being particularly well documented Over the past three decades the use of herbal medicine preparations or formulations derived from these materials has increased rapidly worldwide Currently the curative effects of medicinal plants are becoming more widely discussed for example in Europe and North America especially as they relate to preventive remedies The application of herbal medicine has been continuously increasing as an element of adjuvant therapies and remains important in many traditional and indigenous medical systems However the evidence on the beneficial therapeutic effects and underlying mechanism of action of herbal medicine among people with CVD and CVD risk factors is still inconclusive This Research Topic is the second in the series and the goal is to provide a forum to advance research on the efficacy and safety of herbal medicine for CVD and CVD risk factors as well as the pharmacological effects and possible underlying mechanisms By focusing and testing on these areas we can provide further evidence for the potential use of herbal medicine for treating CVD and CVD risk factors and therefore improving the prognosis of patients We invite previous authors as well as new contributors to submit manuscripts The subtopics to be covered within this issue are listed below

Clinical studies evaluating the evidence of the potential usefulness of herbal medicine in managing CVD and CVD risk factors
Basic original research on the underlying mechanisms of herbal medicines in managing CVD and CVD risk factors
Reviews or meta analysis on the efficacy of herbal medicine on CVD and CVD risk factors and their underlying mechanisms
Protocols of clinical research aiming to test the potential therapeutic effect of herbal medicine on CVD and CVD risk factors

Note 1 CVD and CVD risk factors include heart disease stroke pulmonary arterial hypertension hematological disorders atherosclerosis hypertension dyslipidemia diabetes obesity etc 2 For manuscripts dealing with plant extracts or other natural substances compounds the composition and the stability of the study material must be described in sufficient detail In particular for extracts chromatograms with the characterization of the dominating compound s are requested The level of purity must be proven and included All the manuscripts submitted to the collection will need to fully comply with the Four Pillars of Best Practice in Ethnopharmacology you can freely download the full version here 3 You need to check your MS using <https://gaonline.org/best-practice> and include a PDF in your submissions with the relevant tables of the tool filled 1 and 2a [Nursery Management & Production](#) ,1995 **Wisconsin Urban & Community Forests** ,2011
