## Control and Field Instrumentation Documentation

Manufacturers often furnish design control systems or a control for industrial processes that are highly used, but which provide no detailed control field instrumentation. The documentation process should not assume that such systems are usually created by the engineering firm that provides the plant. The engineer that implements the process is responsible for documenting the engineering design and providing it.

The control engineer, the plant design engineer, or the control system engineer should provide the documentation. The documentation should be complete and should show a complete and accurate representation of the field instrumentation and control. The field instrumentation should be represented by the control system design, not by the plant design. The field instrumentation should be represented by the control system design, not by the plant design. The field instrumentation should be represented by the control system design, not by the plant design. The field instrumentation should be represented by the control system design, not by the plant design.

**Field Instrumentation** — The field instrumentation of a process that is controlled by a control system.

If the documentation provided by the manufacturer does not include the field instrumentation, the process engineer should provide it. The field instrumentation should be represented by the control system design, not by the plant design.

**Control System** — A system that is used to control a process. The control system should be represented by the control system design, not by the plant design.
