production sector already faced with negative public opinions on nuclear energy and favorable perception of renewable energy resources and about distributed power generation The objective of this edited book is to review all these changes and to present solutions for future power generation Future energy systems must factor in the changes and developments in technology like improvements of natural gas combined cycles and clean coal technologies carbon dioxide capture and storage advancements in nuclear reactors and hydropower renewable energy engineering power to gas conversion and fuel cells energy crops new energy vectors biomass hydrogen thermal energy storage new storage systems diffusion modern substations high voltage engineering equipment and compatibility HVDC transmission with FACTS advanced optimization in a liberalized market environment active grids and smart grids power system resilience power quality and cost of supply plug in electric vehicles smart metering control and communication technologies new key actors as prosumers smart cities The emerging research will enhance the security of energy systems safety in operation protection of environment improve energy efficiency reliability and sustainability The book reviews current literature in the advances innovative options and solutions in power engineering It has been written for researchers engineers technicians and graduate and doctorate students interested in power engineering   Intelligent Capital: Building Self-Governing Financial Architectures in the Cloud Era Vijaya Rama Raju Gottimukkala,2026-02-10 We are entering an age where capital is no longer merely accumulated it is architected Money used to sit in vaults accounts and portfolios waiting for human instruction Today it lives in code flows through networks reacts to data and increasingly makes decisions without asking permission first The cloud did not just change where software runs it changed how value itself behaves This book explores a simple but radical idea financial systems can be designed to govern themselves For centuries finance has depended on layers of human coordination bankers regulators analysts brokers and institutions acting as the nervous system of capital But cloud infrastructure artificial intelligence and programmable financial primitives are dissolving those layers Capital can now be embedded with logic policy and adaptive behavior It can assess risk in real time allocate resources dynamically enforce compliance automatically and evolve based on environmental signals This shift is not merely technological It is architectural When financial structures become software defined they inherit the properties of modern systems scalability modularity automation and resilience But they also inherit new vulnerabilities governance questions and ethical tensions Who is responsible when autonomous capital acts How do we encode trust What does regulation mean when systems operate across jurisdictions at machine speed Intelligent Capital is not a prediction of a distant future It is a map of a transition already underway from human operated finance to self governing financial architectures The goal of this book is not to celebrate automation nor to resist it but to understand it deeply enough to design it wisely Because in the cloud era the most powerful financial institution may no longer be an organization   Operational Intelligence Engineering: Integrated Systems for Smart Service and Production Sectors Uday Surendra Yandamuri,2026-02-13 Operational Intelligence Engineering stands at the intersection of data systems thinking and

decision science transforming how organizations perceive analyze and act in real time As industries navigate rapid digital transformation the ability to convert operational data into actionable intelligence has become not merely advantageous but essential This book Operational Intelligence Engineering Integrated Systems for Smart Service and Production Sectors is written to guide readers through the principles architectures and applications that enable intelligent adaptive operations Across both service and production environments modern enterprises face unprecedented complexity Distributed supply chains cyber physical systems IoT enabled infrastructure AI driven analytics and customer centric service models demand integrated frameworks capable of continuous sensing learning and optimization Operational intelligence engineering responds to this challenge by combining systems engineering data analytics automation and strategic management into cohesive scalable solutions This text presents a structured approach to designing and implementing intelligent operational ecosystems It bridges theory and practice linking foundational concepts such as real time analytics predictive modeling digital twins and process automation with practical applications in manufacturing logistics healthcare energy finance and smart services Emphasis is placed not only on technological integration but also on governance resilience cybersecurity and ethical deployment Designed for engineers researchers practitioners and graduate students this book offers both conceptual clarity and implementation insight Case studies system architectures and methodological frameworks provide readers with tools to engineer operational intelligence systems that are robust adaptive and value driven Ultimately this work envisions organizations that are not merely automated but aware capable of learning from data streams anticipating disruptions and continuously improving performance By integrating intelligence into operations we move toward smarter industries sustainable production and responsive service ecosystems prepared for the demands of an increasingly dynamic world This book is an invitation to engineers in the future   *Big Data Processing Using Spark in Cloud* Mamta Mittal,Valentina E.
