Applied Numerical Methods with MATLAB for Engineers and Scientists Steven C. Chapra, **Methods of Applied Mathematics for Engineers and Scientists** Tomas B.

Co, 2013-06-28. Based on course notes from over twenty years of teaching engineering and physical sciences at Michigan Technological University, Tomas Co's engineering mathematics textbook is rich with examples, applications, and exercises. Professor Co uses analytical approaches to solve smaller problems to provide mathematical insight and understanding and numerical methods for large and complex problems. The book emphasises applying matrices with strong attention to matrix structure and computational issues such as sparsity and efficiency. Chapters on vector calculus and integral theorems are used to build coordinate free physical models with special emphasis on orthogonal coordinates. Chapters on ODEs and PDEs cover both analytical and numerical approaches. Topics on analytical solutions include similarity transform methods, direct formulas for series solutions, bifurcation analysis, Lagrange Charpit formulas, shocks, rarefaction, and others. Topics on numerical methods include stability analysis, DAEs, high order finite difference formulas, Delaunay meshes, and others. MATLAB implementations of the methods and concepts are fully integrated.

Drmac, Miljenko Marusic, Zvonimir Tutek, 2005-02-23 The Third Conference on Applied Mathematics and Scientific Computing took place June 23-27 2003 on island of Brijuni Croatia. The main goal of the conference was to interchange ideas among applied mathematicians in the broadest sense both from and outside academia as well as experts from other areas who apply different mathematical techniques. During the meeting there were invited and contributed talks and software presentations. Invited presentations were given by active researchers from the fields of approximation theory, numerical methods for differential equations and numerical linear algebra. These proceedings contain research and review papers by invited speakers and selected contributed papers from the fields of applied and numerical mathematics. A particular aim of the conference was to encourage young scientists to present results of their research. Traditionally the best presentation given by a PhD student was rewarded. This year awardee was Luka Grubišić, University of Hagen, Hagen, Germany, and we congratulate him for this achievement. It would be hard to organize the conference without generous support of the Croatian Ministry of Science and Technology, and we acknowledge it. We are also indebted to the main organizer, Department of Mathematics, University of Zagreb. Motivating beautiful nature should also be mentioned. And at the end we are thankful to Drs Josip Tambaca and Ivica Nakic for giving this book its final shape.
