
Artificial Intelligence A Modern Approach 3rd Edition Solution Manual

Solutions for Chapter 1 Introduction

1.1

- a. Dictionary definitions of **intelligence** talk about “the capacity to acquire and apply knowledge” or “the faculty of thought and reason” or “the ability to comprehend and profit from experience.” These are all reasonable answers, but if we want something quantifiable we would use something like “the ability to apply knowledge in order to perform better in an environment.”
- b. We define **artificial intelligence** as the study and construction of agent programs that perform well in a given environment, for a given agent architecture.
- c. We define an **agent** as an entity that takes action in response to percepts from an environment.
- d. We define **rationality** as the property of a system which does the “right thing” given what it knows. See Section 2.2 for a more complete discussion. Both describe perfect rationality, however; see Section 27.3.
- e. We define **logical reasoning** as the a process of deriving new sentences from old, such that the new sentences are necessarily true if the old ones are true. (Notice that does not refer to any specific syntax or formal language, but it does require a well-defined notion of truth.)

1.2 See the solution for exercise 26.1 for some discussion of potential objections.

The probability of fooling an interrogator depends on just how unskilled the interrogator is. One entrant in the 2002 Loebner prize competition (which is not quite a real Turing Test) did fool one judge, although if you look at the transcript, it is hard to imagine what that judge was thinking. There certainly have been examples of a chatbot or other online agent fooling humans. For example, see See Lenny Foner’s account of the Julia chatbot at foner.www.media.mit.edu/people/foner/Julia/. We’d say the chance today is something like 10%, with the variation depending more on the skill of the interrogator rather than the program. In 50 years, we expect that the entertainment industry (movies, video games, commercials) will have made sufficient investments in artificial actors to create very credible impersonators.

1.3 Yes, they are rational, because slower, deliberative actions would tend to result in more damage to the hand. If “intelligent” means “applying knowledge” or “using thought and reasoning,” then it does not require intelligence to make a reflex action.

LSC Trigonometry: Revised Third Edition John D. Baley, Gary Sarell, John Baley, 2002-06-26 This text is designed for an in depth course in trigonometry Although the development of trigonometry begins on page one the authors realize that many students may have completed algebra and geometry courses some time ago Therefore they have included algebra and geometry reminders throughout the text where they know from their teaching experience that many students need help in recalling ideas that are necessary to develop trigonometry While it assumes no previous knowledge of trigonometry this book shows how trigonometry can be used in many fields It also develops algebra skills so that students will be thoroughly

prepared to continue their study of mathematics and science The use of graphing calculators has been incorporated throughout the text to reduce the labor of calculations and to expand the students understanding of concepts and give students the opportunity to explore relationships A Student Solutions Manual is available for sale Additionally an Instructor Solutions Manual is available for teachers by emailing shirley_grall@mcgraw-hill.com [El-Hi Textbooks and Serials in Print](#), 2003
