

# Electronic Design Project 2

## Cadence OrCAD PCB Designer 16.3

Professor John H. Davies

2011 October 4

### Objectives

After completing these laboratories, you should be able to:

- analyse by hand, capture, simulate and lay out a simple, one-transistor amplifier on a one-sided printed circuit board (PCB) with manual routing
- lay out an instrumentation amplifier based on three op-amps, comparing one-sided and double-sided boards with automatic routing, and produce photomasks for production
- lay out a mixed-signal system, comparable with the final project in this course, following standard procedures for schematic capture.

### Preamble

Please ensure that you have the following two items for every laboratory:

- A bound, A4 laboratory notebook for making notes, recording results and storing printouts. You will get no marks if you don't have a book with you.
- University (Novell) printer credits so that you can print the circuits, layouts and the results of your simulations. Printouts should be attached firmly into your laboratory book for future reference.

The first part of these laboratories, which is a 'pencil and paper' analysis of a one-transistor amplifier, must be written up in your laboratory book as you do it. The remaining parts do not need much of a record to be kept but you will find it useful to make a note of tricks and tips for using OrCAD. This will be valuable when you have to design your own circuits later this year and in subsequent projects.

These laboratories form part of your professional development because it is expected that every electronic engineer should be able to design, populate and test a printed circuit board (PCB). You must therefore complete the first two designs to be awarded credit. Most of the marks are awarded simply for completion but extra marks will be awarded for good layouts. Late work will be considered for credit but marks will not be awarded.
