Digital Technologies in Teaching and Learning Strategies Alexandr Lyapin, Olga Kalinina, 2022-05-03 This book demonstrates the benefits and drawbacks of using digital technology in preparing online lessons and educational activities. The experience of the last year has shown that online education is becoming a priority. This gave impetus to the creation and development of a new generation of equipment for online education. The book presents latest innovative technologies and modern digital trends in the field of information and communication technology for online education including personalized learning, neuro information systems, mobile learning, development of software and hardware infrastructure and the use of robotics technologies. Key technologies for managing risk and cybersecurity such as cloud and data security, identity and trust, convolution systems, computational intelligence and cryptography techniques, malware and attack analysis are presented. The topic of cybersecurity is one of the most important issues in the modern digital world. The results of the research on recently developed software, decision support systems and cloud technologies make a huge contribution to the development of information technology in the context of digitalization. This book is of interest for developers of applications and programs for online education for software and hardware suppliers who want to keep up with the times and reorient existing IT systems for use in online education.

Reclaiming Opportunities for Effective Teaching Mary Ellen Dunn, 2016-01-07 This book examines the increased standardization and management of community college course outlines in Ontario and the associated decline in the ability of college professors to effectively educate their students. Dunn tracks the changes of increased pressure from corporations to privatize public services and make them for-profit friendly. Interviews of program faculty who have recently been forced to use course outlines for the first time along with critical analyses of a sample course outline and a series of union-related texts illuminate the issue. Dunn attributes the shift of power in community colleges to various factors which include the ideological work college employees do to support global finance capital, the managerial labor which establishes a course outline, the textual duties that faculty members facilitate to set up their own ruling and the performance work that faculty members do to execute the textual rules of their prescriptive course outline work. In order to rectify the harmful effects of the new standardized and supervised curriculum, Dunn identifies areas where effective teaching and learning can be reclaimed.
