explaining what an Arduino is is to start with what you'll use it for. So Arduino may be a tool for controlling electronics. So believe a pencil. A pencil may be a tool to assist you to write stuff you would like to write down something down. hey you'll grab a pencil. Same idea with Arduino. But Arduino may be a tool for controlling electronics you would like to regulate some electronic stuff. hey grab an Arduino. But what do I mean by electronic stuff? Well let me define two general groups of electronics stuff we have got inputs and outputs. Inputs would be electronic devices that gather information. And outputs those would be electronic devices that do things. So for inputs you'll quite consider all the kinds of sensors out there. Like temperature sensors, light sensors, touch sensors, flex sensors, humidity sensors, infrared sensors, distance sensors of these sorts of sensors out there. So you'll consider those sensors as input devices and people sorts of sensors are often read by an Arduino board. Now outputs would be things like DC motors, stepper motors, servo motors, solenoids, LCDs, LED indicator lights, speakers and electrical stuff that have some sort of action within the world.
