The Encyclopaedia and Dictionary of Education Foster Watson, 1922 **A Centaur in London** Fabian Kraemer, 2023-04-25 A nuanced reframing of the dual importance of reading and observation for early modern naturalists Historians traditionally argue that the sciences were born in early modern Europe during the so called Scientific Revolution At the heart of this narrative lies a supposed shift from the knowledge of books to the knowledge of things The attitude of the new style intellectual broke with the text based practices of erudition and instead cultivated an emerging empiricism of observation and experiment Rather than blindly trusting the authority of ancient sources such as Pliny and Aristotle practitioners of this experimental philosophy insisted upon experiential proof In *A Centaur in London*

Fabian Kraemer calls a key tenet of this master narrative into question that the rise of empiricism entailed a decrease in the importance of reading practices Kraemer shows instead that the early practices of textual erudition and observational empiricism were by no means so remote from one another as the traditional narrative would suggest He argues that reading books and reading the book of nature had a great deal in common indeed that reading texts was its own kind of observation Especially in the case of rare and unusual phenomena like monsters naturalists were dependent on the written reports of others who had experienced the good luck to be at the right place at the right time The connections between compiling examples from texts and from observation were especially close in such cases A Centaur in London combines the history of scholarly reading with the history of scientific observation to argue for the sustained importance of both throughout the Renaissance and provides a nuanced textured portrait of early modern naturalists at work

Who Owns English? Mike Hayhoe, Stephen Parker, 1994 This collection brings together views about the nature of English and its users Within the United Kingdom and in some other countries there is a feeling of unease that language and literacy are in decline and that their central role in developing a sense of national unity and heritage is weakening Governmental response to this perception is to move towards centralized state imposed curricula and assessment seeking to guarantee standards through legislation At the same time that the original source of English feels insecure other countries and cultures become increasingly confident about taking over its use and ownership on their own terms and within their own cultures Several of the authors here celebrate the diverse ways in which people across the world are developing their own distinctive varieties of English In exploring these contradictory defensive and optimistic attitudes towards the inevitability of linguistic and cultural change the volume's contributors demonstrate the current liveliness and intensity of discussion about this perennial and increasingly debated topic
