### Section 2: Scientific Proposal

#### 1. State-of-the-art

##### 1.1. Native South American languages

Although Spanish and Portuguese are the primary languages for almost the complete human population of South America, there are actually more than 500 languages spoken in this part of the world (Gordon & Grimes 2005, slightly lower estimates of the number of living languages can be found in Campbell 1997: 170 and Fabre 1998). Most of these languages are so-called ‘native’ languages predating European conquest, most probably direct descendants of the languages of the first human populations entering this continent. Although human populations only entered this part of the world relatively recently (when exactly is controversial), and notwithstanding the very early descriptive and comparative interests by linguists for these languages (the first grammars and dictionaries were published in the 16th century, and the first linguistic families were proposed in the 18th century, cf. Campbell 1997: 29 ff.), still very little is known about the linguistic phylogeny of South American languages. This project aims to unravel the linguistic events that shaped the languages of this continent.

Currently, there is broad consensus about the existence of a few major linguistic families in South America (e.g. Arawakan, Cariban, Tupian, Tucanoan, Chibchan, Quechuan, Panoan), and very many small and shallow groups of related languages, many of which have only one or two member-languages spoken today (Campbell 1997: 170 ff.). Both the details of the internal structure of the accepted groups, and the relation between the many linguistic families, both large and small, are still open questions. Partly, this lack of knowledge is caused by the relatively limited amount of research that has attempted to unravel the linguistic pre-history of South American languages, and by the fact that only relatively recently have broad descriptive efforts started to document more than just the few major native languages of this continent.

The special geographical formation of South America, which is dominated by large mountain ranges and large tropical river basins, has probably also lead to a much more intermingled linguistic situation compared to many other parts of the world. Cross-linguistically, mountain ranges often have an intermingled linguistic situation (cf. the Caucasus or New Guinea), probably caused by valley-wise spread of languages, with older reclusive groups isolated at the end of valleys. Tropical river basins have the special property that populations spread almost exclusively along the rivers, with newer populations settling in between existing groups, or passing them by completely. This leads to the strikingly non-continuous geographic distribution of related languages.

The approach taken by this project to uncover deeper and more detailed genealogical relationships between the languages in South America is to bring together as much as possible of the information available about these languages, and to develop computer-assisted methods to quantify the analysis of all this data. The basis for the quantification will be the historical-comparative method.

##### 1.2. The historical-comparative method

The historical-comparative method to uncover genealogical relationships between languages is an established and highly refined approach, informed by more than two centuries of experience and application. This method is based on the detection of homologous strings of sounds between languages, called ‘cognates’. Shortly summarized, the historical development of phonemes is established on the basis of a sizable set of

**Vulnerability** Martha Albertson Fineman, Anna Grear, 2016-02-11 Martha Albertson Fineman's earlier work developed a theory of inevitable and derivative dependencies as a way of problematizing the core assumptions underlying the autonomous subject of liberal law and politics in the context of US equality discourse. Her vulnerability thesis represents the evolution of that earlier work and situates human vulnerability as a critical heuristic for exploring alternative legal and political foundations. This book draws together major British and American scholars who present different perspectives on the concept of vulnerability and Fineman's vulnerability thesis. The contributors include scholars who have thought about vulnerability in different ways and contexts prior to encountering Fineman's work as well as those for whom Fineman's work provided an introduction to thinking through a vulnerability lens. This collection demonstrates the broad and intellectually exciting potential of vulnerability as a theoretical foundation for legal and political engagements with a range of urgent contemporary challenges. Exploring ways in which vulnerability might provide a new ethical foundation for law and politics, the book will be of interest to the general reader as well as academics and students in fields such as jurisprudence, philosophy, legal theory, political theory, feminist theory and ethics.

**Digitalization and the Welfare State** Marius R. Busemeyer, Achim Kemmerling, Kees Van Kersbergen, Paul Marx, 2022-03-14

This volume explores how digitalization in different forms affects the welfare state. Digitalization is likely to have a lasting impact on work, welfare, and the distribution of income. It will radically transform not only social risks in health, education, and the labour market but also the means by which these risks are addressed. The volume studies how digitalization affects policies as well as the underlying power relationship between actors, i.e. the politics of the welfare state. The volume brings together internationally renowned welfare state scholars to identify the socio-economic challenges that result from rapid technological change, the ensuing political conflicts and struggles in the domain of welfare state reform, broadly defined, how these changes challenge and shape existing labour market and welfare state arrangements. Overall, the volume explains the potential and real political and policy responses to these challenges, grasps the contours of future developments, and reflects on whether the current wave of technological change might promote the emergence of a new paradigm of welfare state policy making. The rapid and accelerating pace of technological change has potentially radical ramifications for the welfare state that demand an engagement with possible future scenarios. The authors therefore adopt a forward-looking perspective. Based on this approach, the volume uniquely offers a theoretically informed empirical basis for social science and public debates about the long-term implications of the digital revolution for the welfare state, covering a broad range of policy areas such as education, pensions, labour market policies, tax policy, and health care.

**The Palgrave Handbook of the Anthropology of Technology** Maja Hojer Bruun, Ayo Wahlberg, Rachel Douglas-Jones, Cathrine Hasse, Klaus Hoeyer, Dorthe Brogård Kristensen, Brit Ross Winthereik, 2022-03-23

This Handbook offers an overview of the thriving and diverse field of anthropological studies of technology. It features 39 original chapters, each reviewing the state of the art of current research and enlivening the field of study through ethnographic analysis of human-technology interfaces, forms of social organisation, technological practices, and/or systems of belief and meaning in different parts of the world. The Handbook is organised around some of the most important characteristics of anthropological studies of technology today: the diverse knowledge practices that technologies involve and on which they depend; the communities, collectives, and categories that emerge around technologies; anthropology's contribution to proliferating debates on ethics, values, and morality in relation to technology and infrastructures that highlight how all technologies are embedded in broader political, economic, and socio-historical processes that shape and often reinforce inequality and discrimination while also generating diversity. All chapters share a commitment to human experiences, embodiments, practices, and materialities in the daily lives of those people and institutions involved in the development, manufacturing, deployment, and/or use of particular technologies. Chapters 11 and 31 are available open access under a Creative Commons Attribution 4.0 International License via link.
