Abstract. We study the asymptotic behaviour of a function satisfying the modified cubic equation

$$\begin{cases} f(x) = x^3 + \frac{1}{x} + \frac{1}{f(x)} & \text{for } x \in \mathbb{R} \\ f(x) = x^3 + \frac{1}{x} + \frac{1}{f(x)} & \text{for } x \in \mathbb{C} \end{cases}$$

where $x \in \mathbb{R}$ and $f(x) \in \mathbb{C}$ are unknown.

An Introduction To Viscosity Solutions for Fully Nonlinear PDE with Applications to Calculus of Variations in L^∞ Nikos Katzourakis, 2014-11-26 The purpose of this book is to give a quick and elementary yet rigorous presentation of the rudiments of the so called theory of Viscosity Solutions which applies to fully nonlinear 1st and 2nd order Partial Differential Equations PDE For such equations particularly for 2nd order ones solutions generally are non smooth and standard approaches in order to define a weak solution do not apply classical strong almost everywhere weak measure valued and distributional solutions either do not exist or may not even be defined The main reason for the latter failure is that the standard idea of using integration by parts in order to pass derivatives to smooth test functions by duality is not available for non divergence structure PDE

Water and Aqueous Solutions at Subzero Temperatures Felix Franks, 2013-11-11 This Volume the last of the series is devoted to water in its metastable forms especially at sub zero temperatures The past few years have witnessed an increasing interest in supercooled water and amorphous ice If the properties of liquid water in the normal temperature range are already eccentric then they become exceedingly so below the normal freezing point in the metastable temperature range Water can be supercooled to 39 C without too much effort and most of its physical properties show a remarkable temperature dependence under these conditions Although adequate explanations are still lacking the time has come to review available knowledge The study of amorphous ice that is the solid formed when water vapor is condensed on a very cold surface is of longer standing It has achieved renewed interest because it may serve as a model for the liquid state There is currently a debate whether or not a close structural relationship exists between amorphous ice and supercooled water The nucleation and growth of ice in supercooled water and aqueous solutions is also still one of those grey areas of research although these topics have received considerable attention from chemists and physicists over the past two decades Even now the relationships between degree of supercooling nucleation kinetics crystal growth kinetics cooling rate and solute concentration are somewhat obscure Nevertheless at the empirical level much progress has been made because these topics are of considerable importance to biologists technologists atmospheric physicists and glaciologists
