Jew, Robert J. Mullen, Winson Soo-Hoo, 2003 The Role of the Pharmacist in Patient Care Abdul Kader Mohiuddin, 2020 The goal of a high quality cost effective and accessible health care for patients is achieved through constructing a team based and patient centered health care delivery system The expanded role of pharmacists uplifts them to patient care from dispensing and manufacturing or marketing of drugs Along with doctors and allied health professionals pharmacists are increasingly recognized as an integral part of the patient care team Furthermore colleges of pharmacy need to revise and up date their curricula to accommodate the progressively increasing development in the pharmaceutical education and the evolving new roles of practicing pharmacists in patient care settings This book focuses on the expanded role of the pharmacists in total patient care including prescribing dispensing compounding administering and monitoring of drugs at home hospital community hospice critical care changeover and other care settings The sector is emerging in both developed and under developed countries Overburdened by patient loads and the explosion of new drugs physicians turned to pharmacists more and more for drug information especially within institutional settings And today s patient care pharmacists are taking more

interests in medication review and reconciliation patient education and counseling creating drug therapy regimen and monitoring compliance The purpose of this book is to guide the pharmacists in their daily interactions with patients and to ensure collaboration with other health professionals The contents are mostly based on recently published articles related to patient care with most recent ideas and activities followed by the patient care pharmacists around the globe However a pharmacist implements the care plan in collaboration with other health care professionals and the patient or caregiver Along with professional guidelines the book discusses the concepts and best practices of patient interaction patient rights and ethical decision making for the professional pharmacist apprentice and student In every chapter the role of pharmacists in that chapter specific issues are detailed explicitly so that a professional pharmacist or a student can figure out his or her do s and don ts in that specific situation Moreover further reading references are listed as future recommendations So the book is an archive of potential references too Among so many books about patient care either doctors or nurses roles are highlighted The proposed book highlights the pharmacists roles and responsibilities to the most separated from those of doctors and nurses with the most recent information obtained from most publications in several journals books bulletins newsletter magazines etc *Handbook of Extemporaneous Preparation* Mark Jackson,2010 **Toward a Decision-Centric Precision Public Health: Clinical, Operational, and Analytical Advances** Frank Chen ,Eman Leu,2025-12-17 Precision Public Health aims to bring precision to disease prevention health promotion and the reduction of health disparities in populations Advances in data centric technology breathe life into Precision Public Health as a discipline and drive the evolution of its research Recent years have seen the emerging role of data science driven research as the driver of the development of precision public health as a young science and the maturation of small but emerging bodies of research centering on the application of data sciences to integrate and or analyze real world data from EHR mobile devices social media and sensors for geospatial surveillance and health economic analysis Meanwhile an emerging body of data centric precision public health research has also benefited from more empirical studies designed in accordance with the precision public health framework However there is a lack of any research demonstrating how data driven precision public health research can be translated to inform decisions that can achieve the right intervention at the right time every time to the right population Hence there is a need for a data driven approach to public health research Here our objective is to introduce Precision Public Health research topics that are not only applications of data sciences that bring precision to the prevention of diseases promotion of health and the reduction of health disparities in populations but are also decision centric which enables the translation of findings to decisions at the level of care delivery resource planning and allocation and policymaking Articles are also invited to address and quantify the socioeconomic benefits of implementing precision public health programs for risk identification disease surveillance and preventive intervention Notably the effort to bring precision to medicine and to public health in particular also brings with it the issues of data privacy security consent and self determination and the challenge of making the model

that informs decisions be transparent explainable and free of bias Hence it is also our objective to include as our research topic perspectives on the ethical consideration of bringing precision to public health The research topics will be grouped under four areas First clinical and epidemiological studies that target subgroups of a population whose rationale of selection was data driven and the findings of the studies possess substantive implications in health policy decision making Second studies on optimizing resource allocation pertaining to the delivery and planning of public health and primary care services use operations research and analytics methodology Third innovative data science and decision science methodology for achieving decision centric precision public health Finally the ethical and moral examination of bringing precision to public health with the goal of making it decision centric Topics of interest include but are not limited to the following aspects Data driven characterization of under studied vulnerable subpopulations or groups and the potential implications for public health policy Risk assessment and modeling studies that were either tailored to specific subpopulations or groups of individuals via analytical means or whose findings can demonstrate the unique characteristics of a subpopulation or a group of individuals Implementation science studies whose focus is to develop or tailor instruments tools for enhancing public health policy decision making and evaluate the instruments tools adoption in and or impact on analytically defined subpopulations or groups of individuals Data driven operations research studies that optimize the allocation of resources among different groups of individuals at the service level or among different subpopulations at the policy level to inform public health planning Methodological studies in data sciences or decision sciences that may enhance the precision in the prevention of diseases promotion of health and the reduction of health disparities in populations Methodological studies that facilitate the translation of data into decisions in the context of precision public health Bioethics research on the ethical and moral implications of the roles of data and artificial intelligent in public health decision making that affects different subpopulations or vulnerable groups access to care or information to enhance health or their rights to refuse the provision of their personal data for such care or information Please note The authors should make an effort to include real examples in a critical way considering data quality unbiasedness granularity and how data science contributed to decision making in real life
