Artificial Intelligence in Animal Behaviour, Veterinary Behaviour and Neurology Holger Andreas Volk, Jasmin Nicole Nessler, Anna Zamansky, Sebastian Meller, Annika Bremhorst, 2025-08-18

The new leap innovation Artificial Intelligence (AI) will significantly accelerate the speed of science and translate into clinical practice faster than clinicians ever have been used to. Machine and deep learning techniques are now readily available to analyze large and complex data sets, providing veterinary scientists with a tool to not only better understand complex behaviour traits and neurological conditions but also to delve into the nuances of animal behaviour itself. AI can now write plausible sounding text, recognize written or spoken human words, recognize objects in images, or analyze large amounts of data. Different fields of applications are known so far, such as improving and speeding up interpretation of radiologic findings, interpretation of electroencephalography, diagnosis of autism in children, objectifying ataxia in dogs, detecting pain in cats, and assessing and characterizing animal behaviours across species. At the time of writing, more than 500 AI-based algorithms have been approved by the FDA for human medicine, most of which are used in radiology and neurology. In veterinary neurology and animal behavioural science, only a limited amount of research on AI has been done so far. Most algorithms presented are merely fragments of usable programs and are not suitable for clinical application. Therefore, ready-to-use applications are rare yet essential for implementing AI into everyday routine diagnostic work, ups scientific research, and animal behavioural assessments. The research topic will help to unite current efforts and provide a collection of articles to address some of the current scientific and behavioural gaps. In the future, a clinician might have a clinical decision support tool that generates accurate estimations of likely outcomes of neurological disease and animal behaviour, combining anamnestic, behavioural, clinical, clinical pathology, and imaging information. We are interested in original research, systematic reviews, and opinion papers, not only about the scope and potential of AI for Veterinary Behavior and Neurology but also about the intersection of AI with the study of animal behaviour, ethical considerations, and pitfalls that the development of AI-generated tools could present. Potential themes therefore include, but are not limited to: AI to recognize, monitor, diagnose, or characterise behaviour; neurological deficits or conditions; including a detailed analysis of animal behaviour across a variety of contexts and species.

AI to assess behavioural states in both clinical and natural environments AI to interpret scientific clinical data sets such as clinical pathology omics imaging EEG data and behaviour metrics Ethical and legal considerations when applying or using AI tools in the study of animal behaviour and veterinary medicine Potential of AI to enhance clinical practice in veterinary behavioural medicine veterinary neurology and animal behaviour research Potential of AI enhanced diagnostic and behavioural assessment tools with animals

Developing Countries and Technology Inclusion in the 21st Century Information Society Etim, Alice S., 2020-11-27 In recent years many developing

regions across the globe have made rigorous efforts to become integrated into the global information society. The development and implementation of information communication technology (ICT) devices and policies within various fields of service have significantly aided in the infrastructural progression of these countries. Despite these considerable advancements, there remains a lack of research and awareness on this imperative subject.

Developing Countries and Technology Inclusion in the 21st Century Information Society is an essential reference source that discusses the adoption and impact of ICT tools in developing areas of the world as well as specific challenges and sustainable uses within various professional fields. Featuring research on topics such as policy development, gender differences, and international business, this book is ideally designed for educators, policymakers, researchers, librarians, practitioners, scientists, government officials, and students seeking coverage on modern applications of ICT services in developing countries.

PC AI, 2001 The Implications of new Technology, particularly Artificial intelligence (AI) for International Politics Malam Wasai, 2023-09-18

Submitted Assignment from the year 2023 in the subject Politics General and Theories of International Politics language English abstract

Greater scrutiny is necessary because AI will have a significant impact on international relations such as putting new topics on the international agenda, challenging geostrategic relations, serving as a tool for diplomats and negotiators, and creating new opportunities and concerns about protecting human rights. Scholars and diplomats have found it helpful to think about the different things that affect international relations by breaking them down into three levels of analysis: individual, state, and international.

State level analysis examines the foreign policy behavior of states in terms of state characteristics. For example, some scholars say that all democracies behave a certain way; they don't fight with other democracies.

Artificial intelligence impact governance

As AI continues to evolve and permeate various aspects of our lives, its implications for AI and how it impacts businesses are significant. AI (artificial intelligence) refers to machines that can perceive, synthesize, and infer information. It is the science and engineering of intelligent machines that can mimic human intelligence to perform tasks and then use the information they collect to improve themselves. AI is designed to significantly enhance human capabilities and contributions, making it a valuable business asset.
