Many students of linear algebra hit a wall at mid semester Having spent the first part of the term doing mostly computational  
work they are unprepared for the rigors of conceptual thinking in an abstract setting that is frequently the focus of the  
second half of the course Holt's *Linear Algebra with Applications* blends computational and conceptual topics throughout  
Early treatment of conceptual topics in the context of Euclidean space gives students more time and a familiar setting in  
which to absorb them This organization also makes it possible to treat eigenvalues and eigenvectors earlier than in most  
texts Abstract vector spaces are introduced later once students have developed a solid conceptual foundation Concepts and  
topics are frequently accompanied by applications to provide context and motivation Because many students learn by  
example *Linear Algebra with Applications* provides a large number of representative examples over and above those used to  
introduce topics The text also has over 2500 exercises covering computational and conceptual topics over a range of  
difficulty levels     Beyond Formulas in Mathematics and Teaching Daniel Chazan, 2000-01-01 Based on the author's  
experience as a researcher and teacher of lower track students *Beyond Formulas in Mathematics and Teaching* illuminates  
the complex dynamics of the algebra classroom From within this setting Daniel Chazan thoughtfully explores topics that  
concern all dedicated educators how to really know one's students how to find engaging material and how to inspire  
meaningful classroom conversations Throughout he addresses the predicaments that are central to the lives of teachers who  
work in standard educational settings By highlighting teaching dilemmas Chazan prompts readers to consider what their own  
responses would be in similar situations With an eye to ways of restructuring roles and relationships *Beyond Formulas in*
