Wilsey,2000 **ACM Transactions on Modeling and Computer Simulation** ,2000 **Machine Vision and Machine Learning for Plant Phenotyping and Precision Agriculture** Huajian Liu,Zhanyou Xu,2024-01-18 Plant phenotyping PP describes the physiological and biochemical properties of plants affected by both genotypes and environments It is an emerging research field that is assisting the breeding and cultivation of new crop varieties to be more productive and resilient to challenging environments Precision agriculture PA uses sensing technologies to observe crops and then manage them optimally to ensure that they grow in healthy conditions have maximum productivity and have minimal negative effects on the environment Traditionally the observation of plant traits heavily relies on human experts which is labor intensive time consuming and subjective Automatic crop traits measurement in PP and PA are two different fields but they share the same sensing and data processing technologies in many respects Recently driven by computer and sensor technologies machine vision MV and machine learning ML have contributed to accurate high throughput and nondestructive plant phenotyping and

precision agriculture However these technologies are still in their infant stage and there are many challenges and questions related to them that still need to be addressed The goal of this Research Topic is to provide a platform to share the latest research results on the application of MV and ML for PP and PA It aims to highlight cutting edge technologies bottle necks and future research directions for MV and ML in crop breeding crop cultivation disease management weed control and pest control *Indian Science Abstracts* ,1992 Computer Architecture: A Minimalist Perspective William F. Gilreath,Phillip A. Laplante,2003-03-31 This book examines computer architecture computability theory and the history of computers from the perspective of minimalist computing a framework in which the instruction set consists of a single instruction This approach is different than that taken in any other computer architecture text and it is a bold step The audience for this book is researchers computer hardware engineers software engineers and systems engineers who are looking for a fresh unique perspective on computer architecture Upper division undergraduate students and early graduate students studying computer architecture computer organization or embedded systems will also find this book useful A typical course title might be Special Topics in Computer Architecture The organization ofthe book is as follows First the reasons for studying such an esoteric subject are given Then the history and evolution of instruction sets is studied with an emphasis on how modern computing has features ofone instruction computing Also previous computer systems are reviewed to show how their features relate to one instruction computers Next the primary forms of one instruction set computing are examined The theories of computation and of Turing machines are also reviewed to examine the theoretical nature of one instruction computers Other processor architectures and instruction sets are then mapped into single instructions to illustrate the features of both types of one instruction computers In doing so the features of the processor being mapped are highlighted
