**A.L.A. Index to General Literature** American Library Association, 1901      Modern Methods for Theoretical Physical Chemistry of Biopolymers Evgeni Starikov, James P. Lewis, Shigenori Tanaka, 2011-08-11 Modern Methods for Theoretical Physical Chemistry of Biopolymers provides an interesting selection of contributions from an international team of researchers in theoretical chemistry This book is extremely useful for tackling the complicated scientific problems connected with biopolymers physics and chemistry The applications of both the classical molecular mechanical and molecular dynamical methods and the quantum chemical methods needed for bridging the gap to structural and dynamical properties dependent on electron dynamics are explained Also included are ways to deal with complex problems when all three approaches need to be considered at the same time The book gives a rich spectrum of applications from theoretical considerations of how ATP is produced and used as energy currency in the living cell to the effects of subtle solvent influence on properties of biopolymers and how structural changes in DNA during single molecule manipulation may be interpreted Presents modern successes and trends in theoretical physical chemistry chemical physics of biopolymers Topics covered are of relevant importance to rapidly developing areas in science such as nanotechnology and molecular medicine Quality selection of contributions from renowned scientists in the field

**The "A.L.A." Index** William Isaac Fletcher, 1901      **Emergence in Context** Robert C. Bishop, Michael Silberstein, Mark Pexton, 2022 Science philosophy of science and metaphysics have long been concerned with the question of how order stability and novelty are possible and how they happen How can order come out of disorder This book introduces a new account contextual emergence seeking to answer these questions The authors offer an alternative picture of the world with an alternative account of how novelty and order arise and how both are possible Contextual emergence is grounded primarily in the sciences as opposed to logic or metaphysics It is both an explanatory and ontological account of emergence that gets beyond the impasse between weak and strong emergence in the emergence debates It challenges the foundationalist or hierarchical picture of reality and emphasizes the ontological and explanatory fundamentality of multiscale stability conditions and their contextual constraints often operating globally over interconnected interdependent and interacting entities and their multiscale relations It also focuses on the conditions that make the existence stability and persistence of emergent systems and their states and observables possible These conditions and constraints are irreducibly multiscale relations so it is not surprising that scientific explanation is often multiscale Such multiscale conditions act as gatekeepers for systems to access modal possibilities e.g. reducing or enhancing a system's degrees of freedom Using examples from across the sciences ranging from physics to biology to neuroscience and beyond this book demonstrates that there is an empirically well grounded viable alternative to ontological reductionism coupled with explanatory anti reductionism weak emergence and ontological disunity coupled with the impossibility of robust scientific explanation strong emergence Central metaphysics of science concerns are also addressed Emergence in Context A Treatise

in Twenty First Century Natural Philosophy is written primarily for philosophers of science but also professional scientists from multiple disciplines who are interested in emergence and particularly in the metaphysics of science
