*BICS 2008* Calin Enachescu,Barna Laszlo Iantovics,F. G. Filip,2009-05-26 This book contains selected papers presented at the International Conference Bio Inspired Computational Methods Used for Difficult Problems Solving Development of Intelligent and Complex Systems BICS 2008 organized by the Romanian Academy Bucharest and Petru Major University of Tg Mures held on 5 7 November 2008 at Petru Major University of Tg Mures Romania The aim of this conference was to bring together researchers working in the main areas of Complex Systems Artificial Intelligence Intelligent Systems and Natural Computing for presenting their recent results and exchanging ideas The papers included in the book provide an introduction and also a state of the art to the bio inspired computer science

The areas covered were those of natural computing such as evolutionary and neural computing as well as younger research directions such as DNA computing and colony optimization with connections and applications to intelligent complex systems and to medical informatics. Thus both directions of research from biology to informatics and from informatics to biology are illustrated.

Quantitative Characterization of Microstructure of Asphalt Mixtures Amit Bhasin, Swapneel Badgekar, Anoosha Izadi, 2010

**Designing Fine Aggregate Mixtures to Evaluate Fatigue Crack Growth in Asphalt Mixtures** Anoosha Izadi, Amit Bhasin, Arash Motamed, 2011 Fatigue cracking is a significant form of pavement distress in flexible pavements. The properties of the sand asphalt mortars or fine aggregate matrix FAM can be used to characterize the evolution of fatigue crack growth and self healing in asphalt mixtures. This study compares the internal microstructure of the mortar within a full asphalt mixture to the internal microstructure of the FAM specimen. This study also conducts a limited evaluation of the influence of mixture properties and methods of compaction on the engineering properties of the FAM specimens. The results from this study although limited in number indicate that in most cases the SGC compacted FAM specimen had a microstructure that most closely resembled the microstructure of the mortar within a full asphalt mixture. Another finding from this study was that at a given level of damage the healing characteristic of the three different types of FAM mixes was not significantly different. This indicates that the healing rate is mostly dictated by the type of binder and not significantly influenced by the gradation or binder content as long as the volumetric distribution of the mastic was the same.

In other words the inherent healing characteristics of the asphalt binder plays a more significant role relative to other properties e g volumetrics in the overall fatigue cracking resistance of the asphalt mixture
