

Anti-Inflammatory Food Guide

The food we eat is one of the most powerful ways to fight inflammation because certain nutrients and compounds in food directly impact the body's inflammatory processes. Unlike medications, which may only target symptoms, food provides the building blocks for our cells, tissues, and immune responses, allowing us to address inflammation at a foundational level. Here is a list of foods that are effective in managing and preventing inflammation.

Turmeric

Contains curcumin, a polyphenol that inhibits the NF-kappaB pathway, COX-2 enzymes, and pro-inflammatory cytokines, reducing inflammation at the molecular level.

Salmon

Rich in omega-3 fatty acids (EPA and DHA) that produce anti-inflammatory lipid mediators, resolving inflammation and reducing pro-inflammatory cytokines.

Blueberries

High in anthocyanins, which inhibit pro-inflammatory pathways and oxidative stress, providing strong anti-inflammatory and antioxidant properties.

Avocado

Contains monounsaturated fats and polyhydroxylated fatty alcohols, exerting anti-inflammatory effects by modulating immune responses and reducing cytokine production.

Broccoli

Rich in sulforaphane, a compound that activates NRF2, a transcription factor that reduces inflammation by increasing antioxidant defense mechanisms.

Ginger

Gingerol, the active compound in ginger, suppresses inflammatory mediators and cytokines, providing anti-inflammatory and antioxidant effects.

Spinach

Abundant in vitamins (such as folate and vitamin K) and phytochemicals (like quercetin), providing anti-inflammatory effects by modulating immune responses and reducing oxidative stress.

Kale

High in antioxidants, including quercetin and kaempferol, known for their anti-inflammatory properties by reducing inflammation at the cellular level.

Olive Oil

Contains oleocanthal, a natural anti-inflammatory compound that inhibits COX enzymes similarly to ibuprofen, reducing inflammation.

Tomatoes

Rich in lycopene, an antioxidant with anti-inflammatory properties that inhibits inflammatory mediators and reduces oxidative stress.

Walnuts

Provide omega-3 fatty acids (ALA) and polyphenols, exerting anti-inflammatory effects by reducing pro-inflammatory cytokines and oxidative stress.

Dark Chocolate

Contains flavonoids with anti-inflammatory and antioxidant properties, inhibiting inflammatory pathways and reducing oxidative stress.

Flax Seeds

High in alpha-linolenic acid (ALA), an omega-3 fatty acid with anti-inflammatory effects by reducing pro-inflammatory cytokines and oxidative stress.

Green Tea

Epigallocatechin gallate (EGCG) in green tea has anti-inflammatory and antioxidant properties, inhibiting inflammatory signaling pathways and reducing oxidative stress.

Sweet Potatoes

Rich in beta-carotene, a precursor to vitamin A, known for its anti-inflammatory effects by modulating immune responses and reducing oxidative stress.

Harnessing the Potential of Functional Foods Containing Bioactive Compounds:

Implications for Health and Sustainability Ali Rashidinejad, Muhammad Ijaz Ahmad, 2026-03-10 Functional foods containing bioactive compounds have emerged as a subject of immense interest due to their potential in promoting health and mitigating chronic diseases. However, despite the growing popularity, there exists a critical need to comprehensively understand their mechanisms of action, assess their impact on human health across various demographics, and optimize their production and consumption within sustainable food systems. This Research Topic seeks to bridge these knowledge gaps and provide a holistic perspective on the role of functional foods in enhancing human health and sustainability. Functional foods containing bioactive compounds have garnered significant attention due to their potential to promote health and prevent chronic diseases. This Research Topic will provide a platform for researchers to discuss recent advancements, challenges, and opportunities in the field. Topics of interest may include but are not limited to: Identification and characterization of bioactive compounds in food sources; Sustainable production and processing of functional foods; Mechanisms of action underlying the health benefits of functional foods containing bioactive compounds; Effects of functional foods and bioactive compounds on metabolic health, immune function, and gut microbiota; Role of functional foods in the prevention and management of specific chronic diseases such as cardiovascular diseases, diabetes, and obesity; Consumer acceptance, behavior, and preferences regarding functional foods; Policy and regulatory aspects related to functional foods and bioactive compounds.

Micronutrients and Metabolic Diseases, volume II Peng An, Aimin Yang, Jinhui Li, Yongting Luo, 2026-02-03 Micronutrients including vitamins, minerals, and phytochemicals are essential components of human nutrition, playing pivotal roles in various metabolic processes and maintaining the normal function of systems such as the cardiovascular, digestive, and immune systems, as well as in erythropoiesis and bone health. Despite their importance, an imbalanced intake of these micronutrients can adversely affect human health, potentially leading to metabolic diseases like cardiovascular diseases, type 2 diabetes, and neurodegenerative disorders. Current dietary patterns such as the Mediterranean diet and the Dietary Approach to Stop Hypertension (DASH), which are rich in beneficial micronutrients, have been recommended for their potential to improve cardiometabolic health. Supplementation of specific micronutrients such as folic acid and vitamin D has also been shown to be a cost-effective intervention for improving metabolic health outcomes. However, the precise roles of many micronutrients in metabolic diseases and their underlying regulatory mechanisms remain inadequately understood, necessitating further research to elucidate these relationships and mechanisms. This research topic aims to provide comprehensive epidemiological evidence and mechanistic insights into the metabolism of micronutrients and their impacts on human health outcomes. By doing so, the research seeks to contribute to the development of healthier dietary patterns that can prevent or mitigate metabolic diseases. The research will focus on identifying the relationships between micronutrients and metabolic diseases, assessing the long-term impacts of imbalanced micronutrient intake, and dissecting the mechanisms of micronutrient metabolism. To gather further insights into the complex interactions between micronutrients and metabolic

diseases we welcome articles addressing but not limited to the following themes Observational studies interventional studies and systematic reviews on micronutrient intake and its association with risk factors or incidence of metabolic diseases Functional studies providing mechanistic insights into micronutrient metabolism with relevance to human health Review articles on the role of micronutrients in metabolic diseases Studies focusing on the health impact of combinations of multiple vitamins minerals or phytochemicals Investigations into the long term effects of micronutrient imbalances on metabolic health In the first volume of the research topic Micronutrients and metabolic diseases it comprises 22 articles covering the epidemiological and mechanistic studies investigating an individual micronutrient and its influence on human health Some micronutrients may be needed in combination to be effective The assessment of micronutrient mixture is still lacking Therefore in the second volume of research topic Micronutrients and metabolic diseases we also welcome observational interventional mechanistic studies or reviews focusing on the health impact of multiple vitamins minerals or phytochemicals
