Elements Of Spacecraft Design 1st Ed:

Elements of Spacecraft Design Charles D. Brown, 2002 This text is drawn from the author's years of experience in spacecraft design culminating in his leadership of the Magellan Venus orbiter spacecraft design from concept through launch. The work also benefits from his years of teaching spacecraft design at Colorado University and for AIAA as a home study short course. The work presents a broad view of the complete spacecraft. The objective is to explain the thought and analysis that goes into the creation of a spacecraft with simplicity and with enough worked examples so that the reader can be self-taught if necessary.

Finite Element Multidisciplinary Analysis Kajal K. Gupta, J. L. Meek, 2003 Annotation This book fills a gap within the finite element literature by addressing the challenges and developments in multidisciplinary analysis. Current developments include disciplines of structural mechanics, heat transfer, fluid mechanics, controls engineering, and propulsion technology and their interaction as encountered in many practical problems in aeronautical, aerospace, and mechanical engineering among others. These topics are reflected in the 15 chapter titles of the book. Numerical problems are provided to illustrate the applicability of the techniques. Exercises may be solved either manually or by using suitable computer software. A version of the multidisciplinary analysis program STARS is available from the author. As a textbook, the book is useful at the senior undergraduate or graduate level. The practicing engineer will find it invaluable for solving full-scale practical problems.

AIAA Journal American Institute of Aeronautics and Astronautics, 2005 *Journal of Guidance, Control, and Dynamics*, 2007 *Scientific and Technical Aerospace Reports*, 1987 Lists citations with abstracts for aerospace-related reports obtained from world-wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database. **Technology for Large Space Systems**, 1987 **Journal of Propulsion and Power**, 2008 **Subject Guide to Books in Print**, 1993 *Performance, Stability, Dynamics, and Control of Airplanes* Bandu N. Pamadi, 2004 This book provides a comprehensive and integrated exposure to airplane performance, stability, dynamics, and flight control. The text supports a two-semester course for senior undergraduate or first-year graduate students in aerospace engineering. Basic aerodynamics, dynamics, and linear control systems are presented to help the reader grasp the main subject matter. In this text, the airplane is assumed to be a rigid body; elastic deformations and their effects on airplane motion are not considered. Numerous solved examples illustrate theory and design methods. Several exercise problems with answers are included in each chapter to help the reader acquire problem-solving skills. In addition, MATLAB tools are used for the control design.
