

**F2-2.** Two forces act on the hook. Determine the magnitude of the resultant force.

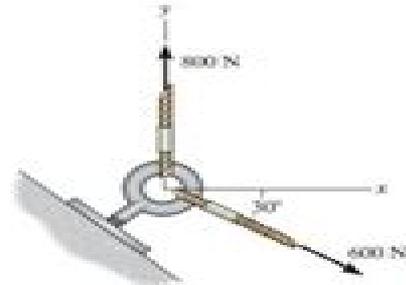

**Prob. F2-2**

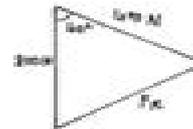

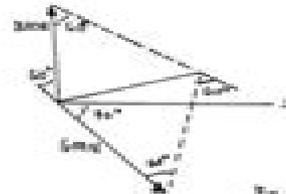

$$F_R = \sqrt{500^2 + 200^2 - (2)(500)(200)(\cos 40^\circ)}$$

$$F_R = 665.7 \text{ N}$$

**F2-3.** Determine the magnitude of the resultant force and its direction measured counterclockwise from the positive  $x$  axis.

**Prob. F2-3**

$$F_R = \sqrt{500^2 + 600^2 - (2)(500)(600)(\cos 50^\circ)}$$

$$F_R = 721.1 \text{ N}$$

$$\frac{500}{721.1} = \frac{300}{721.1}$$

$$\theta = 46.1^\circ$$

Angle between  $x$ -axis

$$\phi = 90^\circ - 46.1^\circ = 43.9^\circ$$

*Solving Practical Engineering Mechanics Problems* Sayavur I. Bakhtiyarov, 2018-05-04 Engineering Mechanics is one of the fundamental branches of science that is important in the education of professional engineers of any major Most of the basic engineering courses such as mechanics of materials fluid and gas mechanics machine design mechatronics acoustics vibrations etc are based on an Engineering Mechanics course In order to absorb the materials of Engineering Mechanics it is not enough to consume just theoretical laws and theorems a student also must develop an ability to solve practical problems Therefore it is necessary to solve many problems independently This book is a part of a four book series designed to supplement the Engineering Mechanics courses in the principles required to solve practical engineering problems in the following branches of mechanics Statics Kinematics Dynamics and Advanced Kinetics Each book contains 6 8 topics on its specific branch and each topic features 30 problems to be assigned as homework tests and or midterm final exams with the consent of the instructor A solution of one similar sample problem from each topic is provided This third book in the series contains seven topics on Dynamics the branch of mechanics that is concerned with the relation existing between the forces acting on the objects and the motion of these objects This book targets undergraduate students at the sophomore junior level majoring in science and engineering

**Engineering Mechanics** Arshad Noor Siddiquee, Zahid A. Khan, Pankul Goel, 2018-05-03 This comprehensive and self-contained textbook will help students in acquiring an understanding of fundamental concepts and applications of engineering mechanics. With basic prior knowledge the readers are guided through important concepts of engineering mechanics such as free body diagrams, principles of the transmissibility of forces, Coulomb's law of friction, analysis of forces in members of truss and rectilinear motion in horizontal direction. Important theorems including Lami's theorem, Varignon's theorem, parallel axis theorem and perpendicular axis theorem are discussed in a step by step manner for better clarity. Applications of ladder friction, wedge friction, screw friction and belt friction are discussed in detail. The textbook is primarily written for undergraduate engineering students in India. Numerous theoretical questions, unsolved numerical problems and solved problems are included throughout the text to develop a clear understanding of the key principles of engineering mechanics. This text is the ideal resource for first year engineering undergraduates taking an introductory single semester course in engineering mechanics.

**Inverse Problems in Engineering Mechanics IV** Mana Tanaka, 2003-11-19 This latest collection of proceedings provides a state of the art review of research on inverse problems in engineering mechanics. Inverse problems can be found in many areas of engineering mechanics and have many successful applications. They are concerned with estimating the unknown input and/or the characteristics of a system given certain aspects of its output. The mathematical challenges of such problems have to be overcome through the development of new computational schemes, regularization techniques, objective functionals and experimental procedures. The papers within this represent an excellent reference for all in the field. Providing a state of the art review of research on inverse problems in engineering mechanics. Contains the latest research ideas and related techniques. A recognized standard reference in the field of inverse problems. Papers from Asia, Europe and America are all well represented.

**Inverse Problems in Engineering Mechanics II** G.S. Dulikravich, Mana Tanaka, 2000-12-11 Inverse Problems are found in many areas of engineering mechanics and there are many successful applications e.g. in non-destructive testing and characterization of material properties by ultrasonic or X-ray techniques, thermography etc. Generally speaking, inverse problems are concerned with the determination of the input and the characteristics of a system given certain aspects of its output. Mathematically such problems are ill-posed and have to be overcome through development of new computational schemes, regularization techniques, objective functionals and experimental procedures. Following the IUTAM Symposium on these topics held in May 1992 in Tokyo, another in November 1994 in Paris and also the more recent ISIP 98 in March 1998 in Nagano, it was concluded that it would be fruitful to gather regularly with researchers and engineers for an exchange of the newest research ideas. The most recent Symposium of this series, International Symposium on Inverse Problems in Engineering Mechanics ISIP2000 was held in March of 2000 in Nagano, Japan, where recent developments in inverse problems in engineering mechanics and related topics were discussed. The following general areas in

inverse problems in engineering mechanics were the subjects of ISIP2000 mathematical and computational aspects of inverse problems parameter or system identification shape determination sensitivity analysis optimization material property characterization ultrasonic non destructive testing elastodynamic inverse problems thermal inverse problems and other engineering applications The papers in these proceedings provide a state of the art review of the research on inverse problems in engineering mechanics and it is hoped that some breakthrough in the research can be made and that technology transfer will be stimulated and accelerated due to their publication
