**Abstract.** This electric generator is a simple operated electro-mechanical system which is controlled by gear and electricity is produced by the generator. This electric generator has been designed by using Sprocket and Chain, Gear, Flywheel, Bearing, spring, Generator, and Battery. Our target was to design and Construct a system that will produce Electricity using road transport pressure. When pressure is created on the pressure lever, the wheels of designated system rotate thoroughly and this rotation of wheels produce electricity in dc generator. The generated electricity may be used to meet the local demand. This may solve partially the national power generation problem.

## INTRODUCTION

Production of Electricity is done by giving pressure on the pressure Lever. By Imposing weight on the pressure lever. The gear will force to the rotate. The rotation of gear will force the generator to produce electricity. There is no fuel so it is environment friendly.

There is a huge amount of difference in our country power demand & generation. Beside this most of the power in our country is meet by the conventional system using Fossil oil, Coal & Gas. All these are non-renewable. All of these may finish after a time. Along with this problems these problems, fossil fuel base generator pollutes our environment. Consequently, engineers must make serious and unrelenting efforts to explore the possibilities of harnessing energy from a variety of unconventional sources of energy. This project is one step in that direction.
