Current Science, 1977 Introduction to Geology: India's Geological Wonders Siva Prasad Bose, 2025-02-18 India is one of the most geologically remarkable regions on Earth Its landscapes from the world's highest mountain range to one of its largest river plains from ancient volcanic plateaus to dynamic island chains are the product of forces that have been at work for billions of years And many of those forces are still active today Introduction to Geology India's Geological Wonders is a comprehensive yet accessible guide to the deep history of the Indian subcontinent written for readers with no prior background in earth sciences Drawing on established geological research it explains not just what India's landscapes look like but why they exist and what they tell us about the planet we live on The book covers the full sweep of India's geological story the subcontinent's origins as part of the ancient supercontinent Gondwana its record breaking northward drift across the Tethys Sea the collision with the Eurasian Plate that created the Himalayas and continues to trigger earthquakes across northern India today It examines the Deccan Traps one of the largest volcanic events in Earth's history and their lasting influence on soil agriculture and even the fate of the dinosaurs It explores India's shifting coastlines the volcanic origins of the Andaman and Nicobar Islands the mystery of submerged settlements like Dwarka and the geological kinship between Kerala and Sri Lanka Later chapters connect geology to everyday life the mineral wealth that has shaped India's economy the groundwater crisis unfolding beneath the Indo Gangetic Plain the earthquake risk facing major cities and the long term challenges posed by rising sea levels and a changing climate Topics include Plate tectonics and the birth of the Himalayas The Deccan Traps and India's volcanic past The formation of the Indo Gangetic Plain Earthquakes seismic zones and disaster preparedness India's coastlines islands and submerged landscapes Minerals mining and natural resources The future of India's land under climate change Accessible to students educators travellers and general readers alike this book offers something rare a rigorous yet engaging account of the science that underlies one of the world's most storied landscapes Understanding India's geology is understanding India itself International Books in Print, 1997 *WHERE WHEN AND HOW ANCESTRAL (LUCA) TO ALL LIFE ORIGINATED* Jagjit Singh Rawat, 2021-12-06 The book is all about the living beings All living beings including humans have originated and evolved from the Last Universal Common Ancestor LUCA that was possible as a result of spontaneous step by step chemical origin in about 3.75 billion years ago from the elements consisting of life body such as nitrogen bases adenine thymine cytosine guanine and uracil which are made up of the elements C H O N and ribose sugar This life originated in the sediments of the palaeo floodplains at the palaeo mouths of fresh water flows rivers on the Hadean surface in the Archaean Eon This was a global phenomenon The life on the rocky planet like our Earth was possible because of existence of fresh water bodies over minerals metals and clay deposits which rested on Hadean surface and active geological processes and active environments The book also makes an attempt to explain as to how do the simple elements like C H O N S and P first change to simple chemistry H₂O NH₃ followed by CH₄ HCN and monomers

monosaccharides amino acids glycerol s fatty acids nucleotides and polymers carbohydrates proteins lipids and nucleic acids There was not much development for about 3210 million years from 3750 million years to 540 million years and suddenly changed jumped to complex life forms in about 541 million years ago Here the life originated and evolved without head and heart from 3750 million years ago to 522 million years ago i e for about 3228 million years The head was originated and evolved in about 521million years ago However consciousness emerged along with bonding of carbon with hydrogen and other elements which were finally converted into nucleosides having nitrogenous base and ribose sugar The gravity and gravitational force intertwined with electromagnetic force were the reason there were bonding of carbon and hydrogen and other elements to originate and evolve LUCA which stayed away from thermodynamic equilibrium THE ARCHITECT OF OUR UNIVERSE JAGJIT SINGH RAWAT,2020-03-11 There was only a space which was cold smooth continuous infinite eternal and without boundary and any visible matter and energy before creation of our early Universe However this space may not have been empty It was perhaps the Dark Matter particle which popped up from this space And due to its intrinsic properties it converted itself into a Supersymmetrical Superparticle that generated Supergravity by the pressures of forces of moving particles and thus into an infinitesimally small dense primordial non transparent opaque plasma fireball This particle first designed the fertile sites due to its own strong gravitational attractive field in which all galaxies stars and planets in different regions of the Universe including our own Milky Way galaxy that contains our Solar System with the eight planets including Earth originated after the collapse of the normal particles With passage of time the great fertile sites were generated on the Earth by tectonics in which sedimentary rocks containing petroleum deposits at depths overlain by great alluvial plains were generated for the evolution and development of living beings including humans and practicing agriculture establishing industries constructing civil facilities and a multitude of other things for the survival of humans
