Freshwater Fishes of Manitoba Kenneth Stewart, Douglas Watkinson, 2004-05-03

Manitoba's ninety three species of fish give the province the third most diverse fish population in Canada. The province's variety of geological features with its major lakes, rivers, tributaries, and watersheds is due in large part to its history as the basin for Glacial Lake Agassiz. This combined with its access to the waters of Hudson Bay and large American river systems has provided habitat for a wide diversity of freshwater fish. Species from lampreys to goldeye, catfish to perch, bigmouth bass to slimy sculpin swim in waters from arctic rivers in the north to Red River tributaries and down to the Mississippi in the south.

*Freshwater Fishes of Manitoba* is a comprehensive user friendly guide. Each species is accurately depicted in detailed colour photographs and accompanying map with descriptions of physical characteristics, spawning and feeding habits, distribution, habitat, ecological role, and economic importance. The guide also includes an extensive glossary, keys to identifying the families, species, and subspecies, and information on documentation and preservation of specimens.

*Freshwater Fishes of Manitoba* is not only the definitive guide to these fishes of Manitoba, it is also accessible and reliable for a range of users from general fishers to professional fish biologists.

**Limnological Survey of Eastern and Central Lake Erie, 1928-29** Charles John Fish, 1960

Abstract Results of a cooperative survey of the central and eastern basins of Lake Erie in 1928-29 by the U.S. Bureau of Fisheries, New York State Conservation Department, Ontario Department of Game and Fisheries, Health Department of the City of Buffalo, and the Buffalo Society of Natural Sciences are presented in a series of papers. Physicochemical data include seasonal vertical and horizontal variations in temperatures, water movements, dissolved oxygen, carbon dioxide, phenolphthalein, and methyl orange alkalinity, pH, chlorides, and turbidity. The species composition, seasonal abundance, and distribution of micro and macroplankton are discussed in detail. Special

consideration is given to the influence of polluted river waters which flow into the lake It is concluded that the lake is remarkably free from chemical and sewage pollution Evidence of pollution farther than 1 mile from possible sources was detected at only 2 stations The nutrient level of Lake Erie is high and the lake should support large fish populations
