Doing Effective Fieldwork Elia Shabani Mligo, 2013-03-13 We live in a context of change whereby postmodernity shapes our understanding and our searching for truth. Postmodernity dictates not only what kind of results we obtain in our researches but also on the ways we use to search for truth. This means that postmodernity dictates the ways we do research in various disciplines, the ways we use to analyze the research results, and the ways we use to communicate the findings. Postmodernity is the paradigm in which we are greatly concerned. What is the place of rules of research, research ethics, selection of the problem, and designing of research as we consider the context whereby nothing absolute can be envisaged? How should one review the literature to suit this postmodern understanding of reality? How should one argue his or her case? This book is

designed to help students in higher learning institutions learn qualitative research methods in classrooms or by themselves It moves students and researchers from modern ways of understanding doing and communicating qualitative research towards postmodern challenges and promises In this case the book is worthy reading to every serious student and researcher who seeks to equip oneself to the current issues of qualitative research methodology **Linux Administration: A Beginner's Guide, Seventh Edition** Wale Soyinka,2015-12-22 Now with a virtual machine showcasing the book s test system configuration Linux Administration A Beginner s Guide Seventh Edition teaches system administrators how to set up and configure Linux quickly and easily Effectively set up and manage any version of Linux on individual servers or entire networks using this practical resource Fully updated to cover the latest tools and techniques Linux Administration A Beginner s Guide Seventh Edition features clear explanations step by step instructions and real world examples Find out how to configure hardware and software work from the GUI or command line maintain Internet and network services and secure your data Performance tuning virtualization containers software management and backup solutions are covered in detail Install and configure Linux including the latest distributions from Fedora Ubuntu CentOS openSUSE Debian and RHEL Manage users permissions files folders and applications Set up and administer system services and daemons Manage software from source code or binary packages Customize build or patch the Linux kernel Work with physical and virtual file systems such as proc SysFS and cgroup Understand networking protocols including TCP IP ARP IPv4 and IPv6 Build reliable firewalls and routers with Netfilter iptables and nftables and Linux Monitor and test network activity and minimize security threats Create and maintain DNS FTP web e mail print LDAP and VoIP servers Share resources using GlusterFS NFS and Samba Implement popular cloud based technologies using Linux virtualization and containers using KVM and Docker
