Elementary Hydraulics James F. Cruise, Mohsen M. Sherif, Vijay P. Singh, 2007 *Elementary Hydraulics* is written for the undergraduate level and contains material to appeal to a diversified class of students. The book is divided into three parts: blends fluid mechanics, hydraulic science, and hydraulics engineering. The first part of the text draws upon fluid mechanics and summarizes the concepts deemed essential to the teaching of hydraulics. The second part builds on the first section while discussing the science of hydraulics. The third section looks at the engineering practice of hydraulics and illustrates practical applications of the material covered in the text. In addition to these applications, the text contains a number of numerical problems and a reading aid at the end of each chapter to enhance student learning.

Homotopy-Based Methods in Water Engineering Manotosh Kumbhakar, Vijay P. Singh, 2023-07-20 Most complex physical phenomena can be described by nonlinear equations, specifically differential equations. In water engineering, nonlinear differential equations play a vital role in modeling physical processes. Analytical solutions to strong nonlinear problems are not easily tractable, and existing techniques are problem specific and applicable for specific types of equations. Exploring the concept of homotopy from topology, different kinds of homotopy based methods have been proposed for analytically solving nonlinear differential equations given by approximate series solutions. *Homotopy Based Methods in Water Engineering* attempts to present the wide applicability of these methods to water engineering problems. It solves all kinds of nonlinear equations, namely algebraic, transcendental equations, ordinary differential equations (ODEs), systems of ODEs, partial differential equations (PDEs), systems of PDEs, and integro-differential equations using the homotopy based methods. The content of the book deals with some selected problems of hydraulics of open channel flow with or without sediment transport, groundwater hydrology, surface water hydrology, general Burger's equation, and water quality. Features: Provides analytical treatments to some key problems in water engineering. Describes the applicability of homotopy based methods for solving nonlinear equations, particularly differential equations. Compares different approaches in dealing with issues of nonlinearity.

Planning and Evaluation of Irrigation Projects Raveendra Kumar Rai, Vijay P. Singh, Alka Upadhyay, 2017-04-06 *Planning and Evaluation of Irrigation Projects: Methods and Implementation* presents the considerations, options, and factors necessary for effective implementation of irrigation strategies, going further to provide methods for evaluating the efficiency of systems in place for remedial correction as needed. As the first book to take this lifecycle approach to agricultural irrigation, it includes real-world examples, not only on natural resource availability concerns but also on financial impacts and measurements. With 21 chapters divided into two sections, this book is a valuable resource for agricultural and hydrology engineers, conservation scientists, and anyone seeking to implement and maintain irrigation systems. Uses real-world examples to present practical insights. Incorporates both planning and evaluation for full scope understanding and application. Illustrates both potential benefits and limitations of irrigation solutions. Provides potential means to increase crop productivity that can result in improved farm income.
