## Using footnotes

As briefly mentioned in Chapter 2, *Formatting Text and Creating Tables*, LaTeX provides a command to typeset footnotes. Let's see it in action.

Let's go back to the very first example of this chapter. We shall insert one footnote in the body text and end it in a section heading:

1. Modify the example inserting a footnote, as shown in the highlighted box:

```

\documentclass [a4paper, 12pt] {book}
\usepackage {longtable} {book}
\usepackage {colortext}
\begin{document}
\chapter {Exploring the page layout}
In this chapter we will study the layout of pages.
\text [some filler text]
\alltext
\text [A lot more filler text]
\make {dummy text}/footnote {writing as a placeholder}
will follow.
\make {lots of filler text}
\alltext {END}
\end{document}

```

2. Compile the code to see how the footnote looks in print.

## 1.2 A lot more filler text

'More dummy text' will follow

### 1.2.1 Plenty of filler text

Here, here is some text without a meaning. This text should show what a printed text will look like at this point. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Heardst giffen"? Kjh - not at all! A filled text like this gives you information about the selected font.
