**Introduction to Electrodynamics** Anton Z. Capri, P. V. Panat, 2002 This introductory text begins with an examination of vector calculus Boundary value problems of electrostatics and magnetostatics are thoroughly discussed Other topics such as radiation relativity radiation from an accelerated charge Lorentz group Green's function and a motion of charged particles in electric and magnetic fields are presented *An Introduction to Non-Ionizing Radiation* Muhammad Maqbool, 2023-11-13 An Introduction to Non Ionizing Radiation provides a comprehensive understanding of non ionizing radiation NIR exploring its uses and potential risks The information is presented in a simple and concise way to facilitate easy understanding of relevant concepts and applications Chapters provide a summary and include relevant equations that explain NIR physics Other features of the book include colorful illustrations and detailed reference lists With a focus on safety and protection the book also explains how to mitigate the adverse effects of non ionizing radiation with the help of ANSI guidelines and regulations An Introduction to Non Ionizing Radiation comprises twelve chapters each explaining various aspects of non ionizing radiation including Fundamental concepts of non ionizing radiation including types and sources Interaction with matter Electromagnetic fields The electromagnetic wave spectrum UV visible light IR waves microwaves and radio waves Lasers Acoustic waves and ultrasound Regulations for non ionizing radiation Risk management of non ionizing radiation The book is intended as a primer on non ionizing radiation for a broad range of scholars and professionals in physics engineering and clinical medicine **Automatic Detection Algorithms of Oil Spill in Radar Images** Maged Marghany, 2019-10-08 Synthetic Aperture Radar Automatic Detection Algorithms SARADA for Oil Spills conveys the pivotal tool required to fully comprehend the advanced algorithms in radar monitoring and detection of oil spills particularly quantum computing and algorithms as a keystone to comprehending theories and algorithms behind radar imaging and detection of marine pollution Bridging the gap between modern quantum mechanics and computing detection algorithms of oil spills this book contains precise theories and techniques for automatic identification of oil spills from SAR measurements Based on modern quantum physics the book also includes the novel theory on radar imaging mechanism of oil spills With the use of precise quantum simulation of trajectory movements of oil spills using a sequence of radar images this book demonstrates the use of SARADA for contamination by oil spills as a promising novel technique Key Features Introduces basic concepts of a radar remote sensing Fills a gap in the knowledge base of quantum theory and microwave remote sensing Discusses the important aspects of oil spill imaging in radar data in relation to the quantum theory Provides recent developments and progresses of automatic detection algorithms of oil spill from radar data Presents 2 D oil spill radar data in 4 D images Nonlocal Continuum Field Theories A. Cemal Eringen, 2007-06-14 Nonlocal continuum field theories are concerned with material bodies whose behavior at any interior point depends on the state of all other points in the body rather than only on an effective field resulting from these points in addition to its own state and the state of some calculable external field Nonlocal field theory extends classical

field theory by describing the responses of points within the medium by functionals rather than functions the constitutive relations of classical field theory Such considerations are already well known in solid state physics where the nonlocal interactions between the atoms are prevalent in determining the properties of the material The tools developed for crystalline materials however do not lend themselves to analyzing amorphous materials or materials in which imperfections are a major part of the structure Nonlocal continuum theories by contrast can describe these materials faithfully at scales down to the lattice parameter This book presents a unified approach to field theories for elastic solids viscous fluids and heat conducting electromagnetic solids and fluids that include nonlocal effects in both space and time memory effects The solutions to the field equations agree remarkably well with atomic theories and experimental observations
