**Handbook of Data Structures and Applications** Dinesh P. Mehta, Sartaj Sahni,2018-02-21 The Handbook of Data Structures and Applications was first published over a decade ago This second edition aims to update the first by focusing on areas of research in data structures that have seen significant progress While the discipline of data structures has not matured as rapidly as other areas of computer science the book aims to update those areas that have seen advances Retaining the seven part structure of the first edition the handbook begins with a review of introductory material followed by a discussion of well known classes of data structures Priority Queues Dictionary Structures and Multidimensional structures The editors next analyze miscellaneous data structures which are well known structures that elude easy classification The book then addresses mechanisms and tools that were developed to facilitate the use of data structures in real programs It concludes with an examination of the applications of data structures Four new chapters have been added on Bloom Filters Binary Decision Diagrams Data Structures for Cheminformatics and Data Structures for Big Data Stores and updates have been made to other chapters that appeared in the first edition The Handbook is invaluable for suggesting new ideas for research in data structures and for revealing application contexts in which they can be deployed Practitioners devising algorithms will gain insight into organizing data allowing them to solve algorithmic problems more efficiently

Proceedings of the ... Annual ACM Symposium on Principles of Distributed Computing, 2005

**Proceedings of the Twenty-Second Annual ACM Symposium on Principles of Distributed Computing**, 2003 This paper presents an efficient asynchronous protocol to compute RSA inverses with respect to a public RSA modulus  $N$  whose factorization is secret and shared among a group of parties Given two numbers  $x$  and  $e$  the protocol computes  $y$  such that  $ye \equiv x \pmod{N}$  A synchronous protocol for this task has been presented by Catalano Gennaro and Halevi Eurocrypt 2000 but the standard approach for turning this into an asynchronous protocol would require a Byzantine agreement sub protocol Our protocol adopts their approach but exploits a feature of the problem in order to avoid the use of a Byzantine agreement primitive Hence it leads to efficient asynchronous protocols for threshold signatures and for Byzantine agreement based on the strong RSA assumption without the use of random oracles
